Abstract

This *Renewables Portfolio Standard 2006 Procurement Verification Draft Staff Report* presents the California Energy Commission's findings on the amount of renewable energy procured by select retail sellers of electricity under California's Renewables Portfolio Standard (RPS). This report presents RPS procurement verification findings for 11 retail sellers, which includes investor-owned utilities (large, small, and multi-jurisdictional utilities), and electric service providers from 2001 and 2003 through 2006, as claimed by the retail sellers.

The findings are based on the Energy Commission's Interim Tracking System, which relies on self-reported procurement and generation data that is verified by Energy Commission staff to the extent possible. The report lists all of the eligible and ineligible procurement claims made by the various reporting entities. The vast majority of the procurement claims were from RPS-certified facilities with sufficient generation to cover the total procurement amount claimed.

However, there were some procurement claims identified as ineligible; most of these were for generation from facilities that were not RPS-certified. Additionally, procurement claims that did not include the renewable energy credits were also determined to be ineligible for the RPS. The Energy Commission is responsible for preventing against double counting; consequently, in addition to the claims not including the renewable energy credits, another reason these procurement claims were not allowed for the RPS was to prevent against double counting.

Without evidence to the contrary, the Energy Commission recommends the California Public Utilities Commission, for determining retail sellers' compliance with the RPS program, count the amounts determined to be eligible toward the annual procurement target as provided in this report toward satisfying the retail sellers' RPS obligations.

Keywords: Renewables Portfolio Standard, RPS, Renewable Energy Credits, RECs, renewable attributes, annual procurement target, initial baseline procurement amount, incremental procurement target, certification, Incremental Geothermal, verification, generation, investor-owned utilities, electric service providers, multi-jurisdictional utilities, community choice aggregators, Western Renewable Energy Generation Information System, WREGIS

Executive Summary

Background

The enactment of Senate Bill 1078 (Sher, Chapter 516, Statutes of 2002) in September 2002 created California's Renewables Portfolio Standard (RPS), requiring retail sellers of electricity to increase their procurement of eligible renewable energy resources by at least 1 percent per year so that 20 percent of their retail sales are procured from eligible renewable energy resources by 2017. In September 2006, Governor Schwarzenegger signed Senate Bill 107 (Simitian and Perata, Chapter 464, Statutes of 2006) codifying the most ambitious RPS program for new renewable generation in the nation—the accelerated RPS goal of 20 percent renewables by 2010. On November 17, 2008, Governor Schwarzenegger raised California's RPS goals to 33 percent by 2020 by signing Executive Order S-14-08. Under the RPS, the Energy Commission is charged with certifying eligible renewable energy resources that satisfy RPS procurement requirements and developing an accounting system to verify retail sellers' compliance with the RPS.

The Energy Commission and the California Public Utilities Commission (CPUC) jointly implement the RPS program. The CPUC is primarily responsible for establishing RPS baselines, implementing annual procurement targets, determining compliance, and imposing penalties for non-compliance. Because it is the role of the CPUC to determine compliance and apply “flexible compliance” rules that allow retail sellers to use excess RPS procurement from earlier years and earmark RPS procurement for future years to address current year RPS shortfalls, Energy Commission staff is not evaluating retail sellers' progress in meeting annual procurement targets in this report. Staff is calculating retail sellers' baselines based on RPS-eligible procurement claims and providing the results of the RPS procurement verification for the CPUC to use when determining compliance.

The Renewables Portfolio Standard 2006 Procurement Verification Draft Staff Report (2006 Verification Report) compares retail sellers' RPS procurement claims with facility-level generation data submitted to various energy programs to verify that there was sufficient generation to cover total procurement claims for 2001, and 2003-2006. This report covers retail sellers, which includes Investor-owned Utilities (large, small, and multi-jurisdictional), electric service providers (ESPs), and community choice aggregators. However, there are no small utilities or community choice aggregators reporting and only one multijurisdictional utility (PacifiCorp) is reporting for the years covered in this report. While publicly owned electric utilities (POUs) must implement an RPS program and report their progress to the Energy Commission, POUs are not regulated by the CPUC and, therefore, are not included in this report.

Energy Commission staff held an RPS Procurement Verification Data Review Workshop to publicly present the initial results of the verification process for this report. Among other agenda items, the workshop addressed the issue of whether energy procurement from facilities under Department of Water Resources contracts should be eligible for RPS compliance.

Before the workshop, two documents were made publicly available with the workshop notice to provide background information and questions to guide the workshop discussion. Many entities provided public comments following the workshop. Staff considers these public comments when preparing this draft staff report.

Purpose

While not legally mandated, *Verification Reports* are prepared as part of the Energy Commission's RPS responsibilities. Upon finalization of the *2006 Verification Report*, the Energy Commission transmits its RPS procurement verification findings to the CPUC. The report will:

- Verify RPS-eligibility of the renewable energy facilities from which each reporting retail seller procured energy and the associated renewables attributes.
- Verify, to the extent possible, that the amount of energy procured by each retail seller was sufficiently covered by each RPS-eligible facility.
- Verify, to the extent possible, that RPS procurement exclusively serves California's RPS and does not support another renewable energy market claim.
- Provide results from the verification process, indicating the eligible and ineligible RPS procurement claims per retail seller and the total amount of eligible RPS procurement.
- Verify that out-of-state renewable facilities satisfy the Energy Commission's RPS delivery requirements.
- Provide analysis of RPS-eligible claims, including availability of generation data for verification, RPS-eligible procurement by resource type, and procurement from new and repowered generation.
- Quantify the amount of incremental geothermal energy.
- Provide results from the IOU procurement claim audit for 2004 and 2005 of procurement claims that were 5 percent or less than the generation data.
- Discuss the limitations of the Interim Tracking System.

Conclusions

The findings in this *Verification Report* are based on the Energy Commission's interim tracking system, which has limitations that should be noted. The robustness of the current approach is limited by the availability and quality of generation data that the RPS-procurement claims are checked against, as well as by the ability of staff to account for renewable energy procurement claims on the voluntary market and other renewable energy reporting programs such as those in other states. Once a *Verification Report* is adopted by the Energy Commission, the report is transmitted to the CPUC, so the CPUC may exercise its role in determining compliance with RPS requirements. The Energy Commission has the right to make corrections to previous verification results if staff later learns of errors.

The report lists all of the eligible and ineligible procurement claims made by the various reporting entities. The vast majority of the procurement claims were from RPS-certified facilities with sufficient generation to cover the total procurement amount claimed.

However, there were some procurement claims identified as ineligible. Most of the ineligible claims were from facilities that were not RPS-certified. Additionally, there were procurement claims that did not include the Renewable Energy Credits (RECs) and were also determined to be ineligible for RPS purposes. The most notable of these ineligible claims were associated with the Mountain View wind facilities for which the RECs were not part of the Department of Water Resources energy procurement contract agreement and for which the associated RECs had been bought and claimed on the voluntary REC market. The Energy Commission is also responsible for preventing against double-counting; consequently, in addition to the claims not including the RECs, another reason these claims were not allowed to be counted for RPS purposes was to prevent against double-counting.

Without evidence to the contrary, the Energy Commission recommends the CPUC, for determining retail sellers' compliance with the RPS program, count the amounts determined to be eligible toward the APT as provided in this report toward satisfying the retail sellers' RPS obligations.

SECTION 1: Introduction

Renewables Portfolio Standard Verification Report Development Process

This *Draft Renewables Portfolio Standard 2006 Procurement Verification Report* (2006 Verification Report) presents the California Energy Commission's findings on the amount of renewable energy procured by select retail sellers of electricity under California's Renewables Portfolio Standard (RPS).

The RPS was established by Senate Bill 1078 (Sher, Chapter 516, Statutes of 2002), which required the state's retail sellers of electricity — electric corporations, electric service providers (ESPs), and community choice aggregators (CCAs) — to procure 20 percent of their retail electricity sales with eligible sources of renewable energy by 2017. California's energy agencies subsequently committed to achieving the 20 percent target by 2010.¹ This accelerated 20 percent target was codified by the enactment of Senate Bill 107 (Simitian and Perata, Chapter 464, Statutes of 2006), which took effect on January 1, 2007. The RPS statutes underscore the importance of increasing the diversity, reliability, public health, and environmental benefits of the energy mix. On November 17, 2008, Governor Arnold Schwarzenegger signed Executive Order S-14-08, setting a 33 percent renewables goal by 2020.^{2,3} The Energy Commission supports this goal, which will also help the state meet the greenhouse gas reduction target of reaching 1990 emissions levels by 2020.⁴

SB 1078 also requires the Energy Commission to certify renewable generating facilities as eligible for California's RPS and to develop an accounting system to verify retail sellers' compliance with the RPS. The Energy Commission's *Renewables Portfolio Standard Eligibility Guidebook* specifies the eligibility criteria and process for certifying generating facilities as eligible for the RPS.⁵ The eligibility criteria include facility qualifications by technology, size, fuel type, initial commercial operation date, and delivery requirements for out-of-state facilities. The responsibility previously held by the Energy Commission to award supplemental energy

⁵ *Renewables Portfolio Standard Eligibility Guidebook*, (Third Edition), Publication # CEC-300-2007-006-ED3-CMF, adopted December 19, 2007, <http://www.energy.ca.gov/2007publications/CEC-300-2007-006/CEC-300-2007-006-ED3-CMF.PDF>

payments (SEPs) to cover the above-market costs to procure new and repowered eligible renewable energy resources was eliminated in October 2007.⁶

The law also required the Energy Commission to certify the specific portion of a geothermal facility's capacity that qualifies as incremental geothermal production and is thereby eligible for satisfying a retail seller's RPS procurement obligations.⁷ Although SB 107 eliminated the Energy Commission's responsibility to certify and measure incremental geothermal production, this report quantifies incremental geothermal procurement for 2006 because the change in statute did not go into effect until January 1, 2007.

The Energy Commission and the California Public Utilities Commission (CPUC) jointly implement the RPS program. The primary responsibilities of the CPUC are to establish RPS baselines, implement Annual Procurement Targets (APTs), determine compliance, and impose penalties for non-compliance. Since the CPUC is responsible for determining compliance, which encompasses the use of "flexible compliance" to address RPS shortfalls, Energy Commission staff is not evaluating retail sellers' progress in meeting APTs in this report. Energy Commission staff is calculating retail sellers' baselines based on RPS-eligible procurement claims and providing the results of the RPS procurement verification for the CPUC to use when determining compliance.

While not legally mandated, the *Verification Report* is prepared as part of the Energy Commission's RPS responsibilities. Upon finalization of the 2006 *Verification Report*, the Energy Commission will transmit its RPS procurement verification findings to the CPUC. The scope of this *Draft Verification Report* has increased significantly relative to the reports released for 2004 and 2005 compliance years. Prior to 2006, the *Verification Reports* analyzed only procurement from the three large IOUs: Pacific Gas & Electric Company (PG&E); San Diego Gas & Electric Company (SDG&E); and Southern California Edison Company (SCE). In October 2006, the CPUC established rules for ESPs and CCAs to participate in the RPS. In May 2008, the CPUC established RPS rules for small IOUs and multi-jurisdictional IOUs (together, referred to as SMJUs).

Because the rules for SMJUs are now finalized and because 2006 is the first compliance year for ESPs, the number of retail sellers included in this *Draft Verification Report* has increased to

⁶ Senate Bill 1036 (Perata, Chapter 685, Statutes of 2007) repealed the provisions in Public Resources Code Section 25743 that charged the Energy Commission with awarding SEPs and required the Energy Commission to return the remaining unencumbered funds available for SEPs to the electrical corporations for administration. Under SB 1036, the Energy Commission transferred these funds to the electrical corporations in March 2008. The California Public Utilities Commission implemented SB 1036 through Resolution E-4199 and Resolution E-4160.

⁷ Before the enactment of SB 107, Public Utilities Code Section 399.12(a)(2) provided that the "Energy Commission shall determine historical production trends and establish criteria for measuring incremental geothermal production that recognizes the declining output of the steamfields and contribution of capital improvements in the facility or wellhead." SB 107 eliminated this requirement, and the Energy Commission revised its *RPS Eligibility Guidebook* to reflect this change in the law.

eleven. Some of these reporting entities are making procurement claims starting in 2001. As reported by the retail sellers, this *Draft Verification Report* includes analysis of claims starting from 2001 and 2003-2006,⁸ and a re-analysis of SCE's data, which SCE resubmitted to account for discrepancies in the way generation amounts were calculated for some of its facilities dating back to 2001.

With the increase in scope of the 2006 *Verification Report* relative to previous reports, in 2008 the Energy Commission's Renewable Energy Office hired additional staff and developed a Microsoft® Access® database. The use of this new database has increased the efficiency and accuracy of the verification process by collating and comparing RPS procurement claims with generation data from multiple sources covering 2001 and 2003-2007.⁹ Using this database, staff prepared individual retail seller procurement tables that summarize the findings of the RPS procurement verification analysis.

The database was used by staff to reevaluate and compare IOU procurement claims with procurement claims from the new reporting entities and also with generation data that was previously unavailable or updated. (Some generation data is periodically updated.) As a result of this new tool and in an effort to be as accurate as possible, staff asked the IOUs to provide invoice statements for claims exceeding generation data by 5 percent or more that had not been identified in past verification efforts. Some of the other retail sellers making RPS procurement claims for the first time had procurement claims going back to 2001 as well. Staff verified all claims to the best of its ability and, in several cases, requested supplemental information from the retail sellers for reasons discussed later in this report.

Energy Commission staff held a public workshop to review its preliminary RPS procurement verification data findings¹⁰. The Energy Commission's Renewables Committee carefully considered oral and written comments pertaining to the staff workshop¹¹, which primarily addressed the IOU's RPS procurement claims from facilities under contract with the Department of Water Resources (DWR).¹² This *Draft 2006 Verification Report* will be finalized

⁸ This report covers RPS procurement claims through 2006. Baseline formulas include 2001 and 2003, even though for some retail sellers the first RPS targets started in 2004. The year 2002 is not included as it does not affect the baseline or RPS target amounts.

⁹ The year 2007 is not covered in this report.

¹⁰ Workshop materials included the following: Attachment A: Background Information Regarding Outstanding Renewables Portfolio Standard Procurement Claims http://www.energy.ca.gov/renewables/02-REN-1038/documents/2009-03-26_workshop/2009-03-26_WORKSHOP_ATTACHMENT_A.PDF and Attachment B: Questions Regarding Outstanding Renewables Portfolio Standard Procurement Claims http://www.energy.ca.gov/renewables/02-REN-1038/documents/2009-03-26_workshop/2009-03-26_WORKSHOP_ATTACHMENT_B.PDF

¹¹ To see the workshop comments go to: http://www.energy.ca.gov/renewables/02-REN-1038/documents/2009-03-26_workshop/comments/

¹² The staff workshop addressed the issue of the IOUs claiming RPS procurement from facilities under contracts with the DWR. The focus of the workshop discussion on this issue concerned SCE's procurement claims from a contract between DWR and the owners of the Mountain View Wind facilities;

following a public comment review period. The Energy Commission will consider the *Final 2006 Verification Report* at a regularly scheduled Business Meeting for possible adoption and subsequent transmittal to the CPUC.

Report Organization and Scope

This report is organized into seven sections. Section 1 is the introduction, followed by Section 2, which describes the Interim Tracking System method. Section 3 provides the procurement verification findings for the retail sellers. Section 4 presents aggregated RPS procurement data pertaining to resource type by year and RPS procurement of new and repowered generation. Section 5 discusses the method and results for incremental geothermal facilities. Section 6 describes the results of a random audit of IOU procurement claims that are 5 percent or under generation data¹³. And lastly, Section 7 discusses the limitations of the current interim tracking system.

This report compares RPS procurement claims made by retail sellers with generation data submitted to various energy programs by generating facilities to verify that there was sufficient generation to cover the total amount of procurement from each facility. The *Verification Report* covers retail sellers, which includes large investor-owned utilities (IOUs), small and multi-jurisdictional utilities (SMJUs), electric service providers (ESPs), and community choice aggregators (CCAs). However, there are no small utilities reporting and only one multijurisdictional utility (PacifiCorp) reporting. Seven ESPs have made RPS procurement claims.¹⁴ There were no CCAs operational in 2006; therefore, there are no CCAs included in this *Draft Verification Report*.

POUs are not covered in this *Draft Verification Report* because they are not regulated by the CPUC. However, they are directed by SB 1078 and SB 107 to design programs with similar goals as the regulated utilities that “recognize the intent of the Legislature to encourage renewables...”¹⁵ and to report annually to the Energy Commission on their progress.

the contract specifically designated ownership of the Renewable Energy Credits (RECs) – or renewable attributes – to the facility owner. The facility owners subsequently sold the RECs to third parties and later sold the facility itself to another entity. This issue is described briefly in Section 2: Method and Section 3: Procurement Verification Findings, and discussed in detail in Appendix A.: IOU Procurement from Facilities under Contract with the Department of Water Resources for California’s RPS Program.

¹³ 2005 RPS Verification Report pg. 7, CEC-300-2007-001-CMF, August 2007. This *Verification Report* noted that an audit of IOU procurement claims that were 5 percent or less than generation data would be reported in the 2006 *Verification Report*. The random audit was performed to determine how accurately procurement claims matched actual invoices.

¹⁴ To see the compliance reports filed by the retail sellers go to:
<http://www.cpuc.ca.gov/PUC/energy/Renewables/compliance.htm>

¹⁵ PUC Section 387(a)

Renewables Portfolio Standard Procurement Targets

The RPS requires California's IOUs, ESPs, SMJUs and CCAs to increase procurement from eligible renewable energy resources by at least 1 percent of their retail sales each year, until they reach 20 percent by 2010.¹⁶ The RPS statute establishes three components for RPS procurement: the initial baseline procurement amount (IBPA), the incremental procurement target (IPT), and the annual procurement target (APT).¹⁷ This *Draft Verification Report* only covers 2001-2006. The year 2001 is used to calculate the baseline. In 2003 and subsequent years, excess RPS-eligible procurement in one year may be applied toward RPS targets in subsequent years under flexible compliance rules. The first year of the APT varies depending on the type of retail seller. Following is a discussion of the IBPA, the IPT, and the APT and how they apply to the various types of retail sellers.

Initial Baseline Procurement Amount

The IBPA identifies the initial RPS procurement of a retail seller. The IBPA calculation depends on the retail seller. IBPA calculations can be found in the retail seller sections below.

Incremental Procurement Target

The incremental procurement target represents the amount of RPS-eligible procurement that the retail seller must purchase, in a given year, above the total amount the retail seller was required to procure in the prior year. A retail seller's IPT equals at least 1 percent of the previous year's total electric retail sales.

The IPT in 2004-2009 is calculated using the following equation:

$$\text{IPT} = 1 \text{ percent of the prior year's retail sales.}^{18}$$

The IPT in 2010 and beyond is the additional generation needed to maintain 20 percent renewable procurement due to load growth.

Annual Procurement Target (APT)

A retail seller's APT is the amount of renewable generation the retail seller must procure in that year. Generally an APT is calculated using the following equation:

$$\text{Current year APT} = \text{current year IPT} + \text{prior year's APT.}^{19}$$

¹⁶ Subject to CPUC rules for flexible compliance (Decision 06-10-050, R.06-05-027, Opinion on Reporting and Compliance Methodology for Renewables Portfolio Standard Program). The 20 percent by 2010 target is also clarified in the above-referenced CPUC decision.

¹⁷ The CPUC is responsible for setting annual procurement targets. See D.06-10-050 for more information.

¹⁸ In some cases, the IPT may be the lesser of (i) 1 percent of the prior year's retail sales, or (ii) the net short for achieving the 20 percent RPS target.

For 2010 and beyond, all retail seller have an APT of 20 percent.

Large IOUs

The 2003 IBPA for the large IOUs is calculated using the following equation:

$$(2001 \text{ RPS-eligible Procurement} / 2001 \text{ Total Retail Sales}) \times 2003 \text{ Total Retail Sales} \\ + 1\text{percent of } 2001 \text{ Total Retail Sales.}$$

The first year of RPS compliance for the IOUs is 2004. The 2004 APT is calculated using the following equation:

$$2004 \text{ APT} = 2003 \text{ IBPA} + 2004 \text{ IPT.}$$

SMJUs

The 2003 IBPA for small IOUs is equivalent to the IBPA for large IOUs.

The 2003 IBPA for multi-jurisdictional utilities is calculated by considering only their retail sales to California customers using the following equation:

$$2003 \text{ IBPA} = (\text{CA proportion of } 2001 \text{ RPS eligible procurement}^{20} / 2001 \text{ total CA retail sales}) \\ \times 2003 \text{ total CA retail sales} + 1 \text{ percent of } 2001 \text{ total CA retail sales.}$$

Like the large IOUs, the SMJUs' RPS obligations began in 2004, but the first year the SMJUs have an APT is in 2007. The 2007 APT is calculated using the following equation:

$$2007 \text{ APT} = 2003 \text{ IBPA} + 2004 \text{ IPT} + 2005 \text{ IPT} + 2006 \text{ IPT} + 2007 \text{ IPT.}$$

Of the MJUs, only PacifiCorp made RPS procurement claims during 2001 and 2003-2006; Sierra Pacific Power did not make RPS Procurement claims for any of these years. The small IOUs, Mountain Utilities and Bear Valley Electric Service, did not make any RPS procurement claims for 2001 and 2003-2006, and therefore are also not addressed in this *Draft Verification Report*.

¹⁹ A retail seller's first year APT is based on the IBPA. For first year APT calculations, refer to the retail sections below.

²⁰ California proportion of MJU's 2001 system RPS eligible procurement is calculated by (2001 total CA retail sales/ 2001 total system sales) X 2001 system RPS eligible procurement. Note that for the 2001 system RPS eligible procurement, CPUC staff has determined that this should include facilities that are not currently RPS certified, but that the MJU believes would be eligible for RPS certification. This does not include facilities that are renewable but for which the MJU does not have contractual right to the associated RECs.

ESPs

For ESPs, the IBPA formula depends on the ESP's first year of retail sales.²¹

The 2005 IBPA for ESPs is calculated using the following equation:

$$2001 \text{ CA RPS-eligible Procurement} / 2001 \text{ total CA retail sales} \times 2005 \text{ total CA retail sales.}$$

For ESPs beginning retail sales in California between January 1, 2002 and December 31, 2005, the analogous formula is:

$$\text{CA RPS-eligible procurement in first year of CA retail sales} / \text{first-year CA retail sales} \times 2005 \text{ total CA retail sales.}$$

For ESPs beginning retail sales after December 31, 2005, the IPBA is equal to first year's RPS-eligible procurement.

The first year of RPS compliance for the ESPs is 2006. The 2006 APT is calculated using the following equation:

$$2006 \text{ APT} = 2005 \text{ IBPA} + 2006 \text{ IPT.}$$

Flexible Compliance

Under Public Utilities Code Section 399.14 (a) (2), the CPUC established "flexible compliance" rules that allow retail sellers to apply excess procurement in one year to subsequent years or defer a deficit for up to three years.²²

This report establishes the amount of RPS-eligible procurement that each retail seller may apply toward their APTs in 2004, 2005 and 2006.²³ Procurement claims that are ineligible for the RPS are listed separately and may include one of the following reasons for not being RPS-eligible: procurement from facilities without RPS-certification; procurement from facilities from which procurement claims exceed generation by 5 percent or greater with no supporting documentation; procurement from distributed generation facilities; and unbundled

²¹ Because ESPs did not participate in 2002-2003 interim procurement and were not subject to RPS procurement requirements before 2006, the additional 1 percent of 2001 retail sales does not apply to them.

²² See D.06-10-050 for detailed information on flexible compliance rules.

²³ This report does not account for banked procurement because banking falls under the CPUC's purview as part of evaluating compliance with the RPS targets. Under the current CPUC rules, surplus procurement in the year before a retail seller's first APT is eligible for banking and can be applied to its future deficits. Because the CPUC allows surplus procurement from 2003 to count for banking purposes, this report includes verification of procurement claims for 2003.

procurement.²⁴ This listing of ineligible claims is consistent with the eligibility requirements in the Energy Commission's *Renewables Portfolio Standard Eligibility Guidebook* and is designed to allow the CPUC to easily understand the reasons that certain claims may have been deemed ineligible by the Energy Commission for RPS compliance purposes.

²⁴ The current version of the *RPS Eligibility Guidebook* states the following: "RECs and energy procured together as a 'bundled' commodity are eligible for the California RPS. RECs sold separately from the underlying energy are termed 'tradable' and are not eligible toward California RPS procurement requirements." *Renewables Portfolio Standard Eligibility Guidebook, Third Edition*, January 2008. <http://www.energy.ca.gov/2007publications/CEC-300-2007-006/CEC-300-2007-006-ED3-CMF.PDF>

SECTION 2: Method

The Interim Tracking System method used for this report is termed “interim” because the Energy Commission has been developing a more robust electronic system to verify procurement toward the RPS. The Energy Commission’s Renewable Committee finds it reasonable for retail sellers to use the electronic system, known as the Western Renewable Energy Generation Information System (WREGIS), for RPS reporting partially in 2008 and fully thereafter.²⁵ WREGIS is now operational, and it will replace the Interim Tracking System and serve as the accounting and verification system for the California RPS.²⁶ The Energy Commission will produce its *Verification Report* using data from the WREGIS system starting with its 2008 *Verification Report* (as described above). The Energy Commission plans to use data from North American Electricity Reliability Council (NERC) E-tags to verify delivery of energy from RPS-eligible out-of-state facilities into California.

Interim Tracking System

To track and verify the retail sellers’ RPS procurement claims, Energy Commission staff applied the approach used since 1998 to develop the *Reconciliation of Retailer Claims Report* for the Power Source Disclosure Program.²⁷ The *Reconciliation of Retailer Claims Report* is prepared by the Energy Commission to compare the source of power that retailers disclose to their customers with the actual energy generated for consumption in California, as required by law.

The first step in the procurement verification analysis was to check that the procurement claimed was generated by a certified RPS-eligible facility. Next, a comparison was made between the amount of RPS-eligible energy procured by retail sellers from a specified facility and the total amount of energy generated by that facility to ensure that the amount claimed did not exceed the amount generated. For example, if two or more retail sellers claimed procurement from the same facility, the cumulative amount of energy procured from that facility was compared with the total amount of energy generated by that facility.

²⁵ Energy Commission staff intends to propose this limited use of WREGIS in reporting year 2008 in a revision to the *RPS Guidebook* planned for early 2010.

²⁶ In reporting 2008 procurement data, staff intends for retail sellers to use the WREGIS State/Provincial/Voluntary Compliance Report, and for data not provided in the WREGIS Report, to use the Interim Tracking System by submitting a CEC-RPS-Track form. The revised *RPS Eligibility Guidebook* is expected to provide instructions on how to report using WREGIS and will contain a revised CEC-RPS-Track form. In 2009, only WREGIS reports are expected to be used for verification.

²⁷ The Power Source Disclosure Program is implemented under Public Utilities Code Section 398.1, et seq., as enacted by Senate Bill 1305 (Chapter 796, Statutes of 1997), and the Energy Commission’s regulations as set forth in Title 20 of the California Code of regulations, sections 1390-1394. This law requires retail suppliers of electricity to disclose to consumers “accurate, reliable and simple to understand information on the sources of energy that are (being) used....” (Public Utilities Code Section 398.1(b).)

If staff found that a procurement claim exceeded generation by more than 5 percent, staff requested information from the retail seller to support the procurement claim. For example, if data showed that a facility generated 100 megawatt-hours (MWh) and the utility reported it procured 108 MWh, staff requested supporting documentation to confirm the procurement claim. The method allows for a 5 percent difference between generation and procurement figures to account for possible reporting differences. These differences may occur for various reasons, such as rounding errors that may arise when comparing data sources that use differing energy units, for example, gigawatt-hours (GWh) versus kilowatt-hours (kWh).

Next, staff determined, to the extent possible, that RPS-eligible energy procured by the retail sellers was counted only once in California or any other state. More information on this topic is provided throughout this report.

Finally, staff verified that procurement from out-of-state facilities satisfied RPS delivery requirements, using the process described in Section 3: Procurement Verification Findings.

Sources of Procurement Data

All retail sellers addressed in this report filed CEC-RPS-Track forms with the Energy Commission to report their annual RPS procurement. In their CEC-RPS-Track filings, the retail sellers reported how much energy they procured in the various calendar years, delineated by RPS-certified facility and by month, as well as their total annual retail sales. Additionally, staff used supporting documentation, such as utility invoices, as a source of data if procurement claimed by the retail seller exceeded generation data by more than 5 percent. For this *Verification Report*, a procurement “claim” or “specific purchase” refers to the amount of energy a retail seller procured from a specific renewable facility. A summary of the information presented in the retail sellers’ CEC-RPS-Track forms and the maximum available generation total for each facility by data source is included Appendix C: Individual Retail Sellers’ Modified RPS Track Forms.

Sources of Generation Data

Energy Commission staff collected generation data from various sources to verify the retail sellers’ procurement data. Self-reported generation data were collected from the U.S. Energy Information Administration’s (EIA) website, which provides annual generation information from facilities with a capacity greater than 1 megawatt (MW).²⁸

Staff also used self-reported data submitted from owners of electric power plants larger than one MW located in California, as reported to the Energy Commission’s Electricity Analysis Office. The data collected include the power plant’s nameplate capacity, fuel type, generation, and fuel usage. Owners of generating facilities with a nameplate capacity of 1 to 10 MW must

²⁸ Annual generation data from the Energy Information Administration can be downloaded from [www.eia.doe.gov/cneaf/electricity/page/eia906_920.html.]

report annually, while owners of facilities larger than 10 MW must report quarterly. These data are also used to provide an annual assessment of how much electricity is produced by fuel type in California to the Department of Finance. This assessment, called the J-11 Table, supports the analyses used in both the *Reconciliation of Retailer Claims Report* and the *Verification Report*.

Staff also reviewed data collected from generating facilities that are registered and eligible for funding from the Energy Commission's Existing or New Renewable Facilities Programs, as well as generation data from its Public Interest Energy Research Program's (PIER) *Wind Performance Report Summary*. Since 1985, operators of wind facilities with a capacity greater than 100 kW that sell electricity to a power purchaser submit the annual generation output of their facilities to the Energy Commission.²⁹

In most cases, facility generation data was compiled from more than one source, consistent with the approach used for the *Reconciliation of Retailer Claims Report*. If the various data sources showed different generation amounts per facility, procurement was compared to the data source showing the most generation from that facility, since lower generation figures may only capture specific periods of generation from that facility. For example, facilities reporting generation to the Existing and New Renewable Facilities Program report only for the months they are eligible to receive incentive payments. For months with no reported generation, there may be an incomplete year's worth of data.

Additional generation data came from the RPS-certified facilities. A facility that applies for certification as RPS-eligible with the Energy Commission must submit data annually on its monthly generation, including any generation sold to an entity that does not qualify as a retail seller pursuant to Public Utilities Code Section 399.12, Subdivision (c), such as publicly owned utilities. These data must be reported on the CEC-RPS-GEN form by May 1 (or the next business day) of each year, unless the facility is owned by a retail seller or a retail seller certified the facility as RPS-eligible on the facility's behalf.

Staff accepted the RPS Track form claim as the generation claim for utility-certified facilities with no otherwise reported generation. As stated on page 47 in the *RPS Eligibility Guidebook, Third Edition*, the retail seller is responsible for reporting the generation data for the facilities it certifies. This reporting requirement is satisfied through the CEC-RPS-Track forms. Therefore, if the facility is utility-certified, the procurement amount reported is accepted as reported on the RPS-Track form, and additional generation data is not required.

As noted above, for facilities in which available generation data indicated that the procurement exceeded generation by 5 percent or greater, staff requested that the procuring utility submit supporting documentation to verify procurement from those facilities.

²⁹ Wind generation data from 1985 through 2003 is available on the electronic Wind Performance Reporting System at <http://wprs.ucdavis.edu/>. The 2005 wind generation data used for this report, however, have not yet been posted on that website, and wind generation data for 2006 was not available for this report.

RPS Certification

The Renewable Energy Office recently developed an RPS Verification Database that allows for more efficient verification of RPS procurement claims. In an effort to make reporting more accurate, staff reverified claims going back to 2001 to include in the *2006 Verification Report* – double checking that all facilities with generation being claimed by retail sellers were RPS-certified and that there was sufficient generation to cover all procurement claims. This process identified four 2001 non-certified facility claims, two from PG&E and two from SCE.

PG&E and SCE made claims from these non-certified facilities for 2001. However, because their contracts for these facilities ended before 2003, PG&E and SCE did not apply for certification for these facilities since they would not be making additional claims from them in future years. The Energy Commission will not count a facility's generation for the RPS unless the facility is certified as RPS-eligible. The *RPS Eligibility Guidebook* allows for a retail seller to certify a facility for the RPS on the facility's behalf if it was under contract with the facility before the adoption date of the first *RPS Eligibility Guidebook*, on April 24, 2004.³⁰ This provision allows retail sellers to receive credit for renewable procurement that pre-dated the Energy Commission's first *RPS Eligibility Guidebook*. PG&E and SCE have had the opportunity to certify these facilities and qualify the procurement from them as RPS-eligible. However, because PG&E and SCE never applied for RPS certification for these facilities, these 2001 claims are from non-certified facilities and, therefore, considered ineligible for the RPS. Additionally, by not certifying these facilities, PG&E and SCE have effectively lowered their RPS baselines.

Verification That RPS Procurement Is Counted Only Once

The Energy Commission also verified, to the extent possible, that RPS procurement was counted only once in California or any other state. The primary data source for this purpose was the data supporting the *Reconciliation Report*. If a retail seller claims specific purchases — purchases traceable to specific generation sources — on its Power Content Label, the seller is then required to submit an annual report to the Energy Commission listing generating facilities from which it procured specific purchases for the previous year.³¹ Those purchases are included in the *Reconciliation Report*.³² Using data prepared for the *Reconciliation Report*, retail seller

³⁰ *RPS Eligibility Guidebook*, Third Edition, pg.29.

³¹ The power content label is the format provided by the Energy Commission for the Power Source Disclosure Program to allow retail electric providers to disclose their fuel source information about electricity product(s) offered for sale to their customers. Published in Title 20 of the California Code of Regulations, Sections 1390-1394.

³² Specific purchases for the Power Source Disclosure Program refer to wholesale power purchases that the retailer can trace to specific generators and thereby claim that the electricity offered for sale to retail customers is of a particular fuel type.

procurement was cross-referenced with retail sales made by other load-serving entities in California, including ESPs and POUs.³³

Initial analyses for the *2006 Reconciliation of Retailer Claims Report* considered annual reports from 29 retail providers and 2 electricity wholesalers. Data from the annual reports included procurement from 876 facilities, including 502 that were certified as RPS-eligible or were “registered” with the Energy Commission as a renewable supplier.³⁴

Coordinating With Other States to Ensure Against Double-Counting

As mentioned above, the *2006 Verification Report* additionally includes information from MJUs. The MJUs include PacifiCorp and Sierra Pacific Power. PacifiCorp is the only MJU entity making RPS claims during the years covered in this report, whereas earlier *Verification Reports* included only the large IOUs. Energy Commission staff verified, to the extent possible, that the renewable generation claimed by PacifiCorp for RPS compliance was not also claimed by retail providers in other states.

The Energy Commission collaborated with state agencies in Oregon and Washington in administering the Power Source Disclosure Program to develop an energy information/tracking system funded by a U.S. Department of Energy grant. This system enables the participating states to determine if generation is claimed in more than one of the participating states. Staff identified claims from two facilities that were also claimed in Oregon and, therefore, not eligible for California’s RPS. These claims are discussed in detail in Section 3: RPS Procurement Verification Findings. Staff also collaborated with the Nevada PUC to confirm that procurement from the two facilities located in Nevada and being claimed for California RPS purposes did not exceed generation when Nevada procurement amounts were combined with California procurement amounts. Details of this coordination are discussed in Section 3: RPS Procurement Verification Findings.

³³ The following entities submitted 2006 Annual Reports to the Power Source Disclosure Program: 3Phases Energy Services, Alameda Power & Telecom, Anaheim Public Utilities, APS Energy Services, American Utility Network, Azusa Light & Water, Bear Valley Electric Service, Biggs Municipal Utilities, Bonneville Power Administration, Burbank Water and Power, City of Escondido, City of Healdsburg, Lodi Electric Utility, Los Angeles Department of Water & Power, Merced Irrigation District, Modesto Irrigation District, City of Needles, Northern California Power Authority, Pacific Gas and Electric Company, City of Palo Alto, Pasadena Water and Power, Pilot Power Group, Redding Electric Utility, Riverside Public Utility, Roseville Electric, Sacramento Municipal Utility District, San Diego Gas & Electric Company, Sempra Energy Solutions, Silicon Valley Power, Southern California Edison Company, Turlock Irrigation District.

³⁴ Through 2006, facilities that did not meet the RPS or SEP eligibility requirements could apply to the Energy Commission for “registration” as a renewable supplier if the facilities generated then applicable electricity from one or more of the renewable resources consistent with definitions in the Energy Commission’s *Overall Program Guidebook* (December 2006, Pub, No. CEC-300-2006-008-ED2). Facilities were also required to report the type and percent of fossil fuel used, if applicable. Effective March 2007, the Energy Commission no longer registers facilities as renewable suppliers.

Coordinating With the Voluntary Renewable Energy Credit Market to Ensure Against Double-Counting of RECs

In addition to ensuring against double-counting generation from facilities selling generation to other states for their regulatory renewable energy programs, Energy Commission staff has begun coordinating with Green-e Energy³⁵ to verify that California RPS procurement claims were not also being counted on the voluntary market. Staff learned that procurement being claimed for the RPS from the Mountain View I & II wind facilities (Mountain View) was also being claimed on the voluntary market. Staff investigated this situation and found that the procurement claims were from a contract between the owners of Mountain View and the Department of Water Resources (DWR) that was executed after California's 2001 electricity crisis. Staff examined the details of the Mountain View contract and found that it specifically allocated the renewable attributes associated with the generation to the facility owners, not to DWR.³⁶ The facility owner legally sold the RECs from the Mountain View facilities to various parties on the voluntary market. As a result, RPS claims from the Mountain View facilities are technically "unbundled" energy-only products, signifying that the energy and the RECs are not bundled together in the contract (which is currently not allowed for RPS compliance). These important issues were discussed in detail at a RPS Procurement Verification Data Review Workshop on March 26, 2009, and many stakeholders provided written comments.³⁷

The Energy Commission is charged with guarding against the double-counting of RECs. After much consideration, the Energy Commission's Renewables Committee determined that claims from the Mountain View facilities under the 2001 DWR contract are ineligible for RPS compliance. This determination was based on the facts that counting procurement from the Mountain View facilities for RPS compliance: 1) would not constitute RPS-eligible procurement because it did not include the RECs, and 2) would essentially allow for double counting because Mountain View RECs have been claimed in both regulatory and voluntary markets. The RECs represent the renewable attributes that, together with the associated energy, constitute RPS-eligible procurement. Allowing energy-only procurement from Mountain View would violate RPS law as the procurement is not bundled; furthermore, it would result in double-counting. Additionally, allowing the Mountain View generation to count for RPS compliance would disrupt the voluntary REC market, create regulatory uncertainty, and leave litigation as the only likely remedy. More discussion in general on this topic can be found in Section 3: Procurement Verification Findings, and in detail in Appendix A: IOU Procurement From Facilities Under Contract With the Department of Water Resources for California's RPS Program.

³⁵ Green-e Energy, a program of the Center for Resource Solutions, is an independent consumer protection program for the sale of renewable energy in the voluntary retail market. www.green-e.org/

³⁶ This contract is publicly available at:
http://www.cers.water.ca.gov/pdf_files/power_contracts/mountain_view/092002_pge_et_amended_ppa.pdf

³⁷ http://www.energy.ca.gov/renewables/02-REN-1038/documents/2009-03-26_workshop/comments/

Staff also worked with Green-e to determine if there were any other RPS and/or voluntary REC market claims of concern. No other issues were determined to represent double-counting.

Long-Term Verification

To better meet its statutory requirements for RPS verification, the Energy Commission, together with the Western Governors' Association, has developed WREGIS. As noted previously, WREGIS will electronically track renewable energy credits (WREGIS Certificates) representing renewable energy generation, and it will replace the Interim Tracking System that was used as the basis for this report.

For each MWh of energy generated and reported, WREGIS creates a unique electronic certificate. Certificates are tagged as "California RPS-Eligible," as applicable. WREGIS will function much like a banking system, with WREGIS Certificates deposited into a generator's "active sub-account." WREGIS certificates can be transferred between accounts but can reside in only one account at a time, thereby protecting against double-counting of renewable energy generation so long as the certificate continues to be tracked in WREGIS.

Renewable generators, load-serving entities, and third parties from the Western United States, Western Canada, and parts of Northern Mexico may participate in WREGIS. As a regional system, WREGIS is designed to verify that reported generation is counted only once in California and throughout the geographic area covered by the Western Electricity Coordinating Council (WECC).³⁸

WREGIS began operation January 25, 2007. According to the Energy Commission's *RPS Eligibility Guidebook, Third Edition*, WREGIS data will replace the Interim Tracking System for verification of RPS-eligible energy generated on or after May 1, 2008. To enable the use of WREGIS, generating facilities, retail sellers, procurement entities, and third parties participating in California's RPS were required to register as account holders with WREGIS by January 1, 2008, with the exception of the three large IOUs (PG&E, SDG&E, and SCE), which had until May 1, 2008, to sign up and begin to use WREGIS.

However, the *Joint Commission Tracking System Operational Report* noted that the CPUC and Energy Commission believe "that it is reasonable for the Energy Commission to continue to use the interim tracking system through 2008 to verify generation for which there is no WREGIS data. The Commissions agree that the interim tracking system will continue to be used in this

³⁸ The WECC is one of four regional organizations that oversee the operation of the nation's bulk power grid and among the 10 regional councils of the North American Electric Reliability Council (NERC). It provides coordination in operating and planning the electricity system for the Western Interconnection. The Western Interconnection is the geographic area containing the synchronously operated electric transmission grid in the western part of North America, which includes parts of Montana, Nebraska, New Mexico, South Dakota, Texas, Wyoming, and Mexico and all of Arizona, California, Colorado, Idaho, Nevada, Oregon, Utah, Washington, and the Canadian Provinces of British Columbia and Alberta.

manner for 2008 generation only.”³⁹ Staff plans to revise the *RPS Eligibility Guidebook* in early 2010 to incorporate this approach for 2008. Generation is reported by a qualified reporting entity to WREGIS, and retail sellers will provide reports generated via WREGIS to the Energy Commission to meet the reporting requirements currently satisfied with the CEC-RPS-Track forms. The WREGIS reports will replace the need for cross-references with other databases to ensure that the RPS-eligible energy is counted only once. WREGIS includes functionality to facilitate matching NERC E-tag data with retired RECs to verify delivery into California from eligible out-of-state renewable generators.

Outlook for Future Reports

Because the scope of the *2006 Verification Report* increased substantially compared to earlier reports and because there were some complicated verification issues associated with this report, completion of the *2006 Verification Report* took longer than previous reports. Staff will begin work on the 2007 report upon completion of the *2006 Verification Report*. This work will include reconciling the reported renewable procurement claimed by the retail sellers with the generation data from the Energy Commission’s Existing and New Renewable Facilities Programs, the Energy Commission’s PIER Program, and generation data reported to the Energy Information Administration.

The Energy Commission postponed the May 1, 2009, submission date for reporting 2008 RPS-eligible procurement and generation data to allow for potential changes in California legislation and to provide the Energy Commission additional time in which to revise and adopt an updated *RPS Eligibility Guidebook*, including updates to WREGIS reporting instructions and CEC-RPS-Track forms. The update is expected to specify, among other changes, that the Interim Tracking System is planned to be used along with WREGIS to report RPS procurement and generation data for 2008, but not in subsequent years. In reporting 2008 procurement data, staff intends for retail sellers to use the WREGIS State/Provincial/Voluntary Compliance Report, and for reporting data not provided in the WREGIS Report, to use the Interim Tracking System by submitting CEC-RPS-Track and CEC-RPS-Gen forms.

The analysis of retail sellers’ 2008 RPS procurement claims will be conducted once a submission date for 2008 data has been given and the data has been provided to staff. Upon completion of the procurement verification analyses, a draft *2008 Verification Report* will be released for public review.

For all reports, typically a *Final Verification Report* will be issued after comments have been reviewed and, as appropriate, incorporated into the final report. Upon approval at a Business Meeting, the report will be transmitted to the CPUC for use in evaluating retail sellers’ verified compliance reports. Starting in 2009, staff anticipates using only WREGIS for RPS procurement and delivery verification purposes.

³⁹ *Joint Commission Report on Tracking System Operational Determination*, page 7
<http://www.energy.ca.gov/2008publications/CEC-300-2008-001/CEC-300-2008-001-CMF.PDF>

SECTION 3: Procurement Verification Findings

This section presents procurement verification findings for IOUs, ESPs and MJUs, updates findings in the previous *Verification Reports* for the IOUs, and provides verified data, including baselines and formulas, necessary for the CPUC, retail sellers, and others to determine retail sellers' progress toward meeting their APTs.

As noted earlier, on March 26, 2009, Energy Commission staff held an RPS Procurement Verification Data Review Workshop to present initial verification results. Staff also sought public input on three issues related to the verification results: 1) SCE RPS procurement claims from an unbundled DWR energy contract with the Mountain View Wind Facilities I and II; 2) PacifiCorp procurement claims from facilities not certified as RPS-eligible; and 3) staff's proposal to continue allocating all incremental geothermal procurement to the IOUs for 2006 and discontinue the incremental geothermal analysis section for the 2007 *Verification Report* and thereafter. Public comments during and after the workshop were considered and incorporated into the appropriate retail seller sections below, as well as in the section on Incremental Geothermal.

Upon the Energy Commission's adoption of this *Verification Report*, retail sellers must file Verified RPS Compliance Reports with the CPUC using Energy Commission verified RPS procurement data within 30 days.⁴⁰ Compliance reports are made publicly available on the CPUC's website and include the amount of procurement the retail sellers propose to use from banking and from earmarking of future contracts.⁴¹ The retail seller compliance reports and other information on the CPUC's website are the most appropriate ways to obtain information about RPS progress.⁴²

A facility must be certified by the Energy Commission for its generation to be eligible for the RPS. This section identifies generation from facilities that have been claimed for RPS purposes, but the facilities have not yet been RPS-certified. It also provides a table for each retail seller that made claims from non-certified facilities that lists the generation amount determined ineligible toward the retail sellers' APT.

Additionally, if there was a discrepancy in which procurement exceeded generation by more than 5 percent, staff included only the excess procurement as RPS-eligible if the retail seller provided supporting documentation, for example a copy of the retail seller's invoices, of the excess procurement. For PG&E, SCE, SDG&E, and PacifiCorp respectively, there are summary

⁴⁰ CPUC, November 20, 2008, Assigned Commissioner's Ruling (R.08-08-009) <http://docs.cpuc.ca.gov/efile/RULINGS/94088.pdf>

⁴¹ Banking occurs when a retail seller applies surplus RPS-eligible procurement from an earlier year to a year with an RPS deficit. Earmarking of future contracts occurs when a retail seller applies future deliveries from an RPS-eligible contract to a year with an RPS deficit.

⁴² CPUC's website and retail sellers' compliance reports can be found at: <http://www.cpuc.ca.gov/PUC/energy/Renewables/compliance.htm>

tables that show the following: total RPS procurement claimed; RPS procurement claims determined to be ineligible for the RPS; total RPS-eligible procurement; and total annual retail sales. This report finds that all procurement claims made by the ESPs are RPS-eligible procurement. Table 9 presents a summary of collected ESP data. Modified CEC-RPS-Track forms for all retail sellers are provided in Appendix C: Individual Retail Sellers' Modified RPS Track Forms. The modified CEC-RPS Track forms compare each retail sellers' procurement claim for each facility with the generation totals from each facility, when available.

Tables 10-12 provide the Initial Baseline Procurement Amounts (IBPA) based on: 1) RPS-eligible procurement data; 2) retail sales data; and 3) the CPUC's formula for calculating the IBPA (as described in Section 1, with the actual formula for each retail seller listed in Appendix B). Because the Energy Commission adjusted the 2001 RPS procurement claims of PG&E, SCE, and SDG&E, the IBPA numbers that were reported in the 2004 and 2005 *Verification Report* have also been adjusted. As a result of these changes, the IOUs' APT will change.

This section closes with a discussion of out-of-state delivery verification and eligibility requirements for California's RPS.

RPS Procurement Verification Results

This subsection specifically compares procurement claims from each retail seller with available generation data for 2001 and 2003-2006 and reports on the eligibility of those RPS claims.

Pacific Gas and Electric Company

Procurement Claims From Facilities That Are Not RPS-Certified

Table 1 presents PG&E procurement claims from two facilities that are not RPS-certified, and, therefore, the claims are not RPS-eligible. Except for these two facilities, all other RPS procurement claimed by PG&E in 2001 and 2003-2006 were from RPS-certified facilities. In 2001, PG&E did not certify the Nove Investment and the Georgia Pacific Corp. facilities because the RPS eligibility criteria had not been established yet and its contracts with those facilities ended before 2003. Although PG&E could have certified the facilities for RPS eligibility even though the contracts had expired, it did not do so, and PG&E's IBPA is reduced as a result of these 2001 claims being counted as ineligible.

**Table 1:
PG&E Ineligible RPS-Procurement**

Facility Name	Fuel Type	Reason Ineligible	Procurement (kWh)				
			2001	2003	2004	2005	2006
Nove Investments	Landfill Gas	Not RPS-certified	11,876,000	0	0	0	0
Georgia Pacific Corporation	Biomass	Not RPS-certified	7,950,000	0	0	0	0
Total			19,826,000	0	0	0	0

Source: RPS staff analysis of PG&E's 2001 CEC-RPS-TRACK form.

RPS Procurement Overclaims

During the verification process using the new database, staff identified the following number of PG&E overclaims by year that needed to be addressed: 13 in 2001; 9 in 2003; 4 in 2004; 1 in 2005; and 4 in 2006. In some cases, PG&E provided invoices showing lower procurement amounts than originally reported and resubmitted RPS Track forms to account for these adjustments. As a result of these downward procurement claim adjustments for 2001, PG&E's baseline amount decreased from what was reported in earlier *Verification Reports*. However, RPS procurement in following years also slightly decreased as well.

Staff identified a possible case of double-counting when PG&E's procurement claim from Calpine Unit 13 was compared with other retail seller procurement claims for the same unit. This analysis showed that the sum of procurement claims was more than the total reported generation amount for that unit. Accordingly, staff requested invoices and proof of bundled purchases from all retail sellers claiming Calpine Unit 13 for RPS purposes. PG&E's invoice indicated that generation may have been provided from multiple Calpine units. Staff contacted Calpine for clarification on the procurement claims and learned that PG&E's claim was the sum of two units claimed together. Working with Calpine and PG&E, staff received the correct unit allocation of procurement for PG&E, and the overclaim issue for Calpine Unit 13 was resolved.

As mentioned in the introduction to this subsection above, there was an RPS Procurement Verification Data Review Workshop to review draft verification findings. At the workshop, participants discussed IOU-managed California Department of Water Resources (DWR) energy contracts with renewable generators.⁴³ After the workshop, PG&E investigated its three DWR contracts. PG&E reported that two of the projects never came on-line and the third contract with Soledad Energy for a biomass facility did not specify who owned the RECs. As a result of its

⁴³ DWR executed energy contracts during California's 2001 electricity crisis. Some of these energy contracts explicitly excluded the associated RECs while others were silent on REC ownership. Following the electricity crisis, the CPUC subsequently assigned responsibility for the various DWR contracts to SCE, SDG&E, and PG&E.

research, PG&E requested that the Energy Commission count its procurement from this facility towards its RPS procurement consistent with the provisions of California Public Utilities Code Section 399.16(a)(5), which states:

“No renewable energy credits shall be created for electricity generated pursuant to any electricity purchase contract with a retail seller or a local publicly owned electric utility executed before January 1, 2005, unless the contract contains explicit terms and conditions specifying the ownership or disposition of those credits. Deliveries under those contracts shall be tracked through the accounting system described in subdivision (b) of Section 399.13 and included in the baseline quantity of eligible renewable energy resources of the purchasing retail seller pursuant to Section 399.15.”⁴⁴

The Energy Commission accepts that the generation from this facility is RPS-eligible and should be counted toward the RPS targets of PG&E as the purchasing retail seller.

In addition to revising its RPS-Track forms to include this DWR contract claim, PG&E also changed its earlier year RPS-Track forms to make procurement claims consistent with invoices – as discussed above.

Table 2 shows a summary of PG&E’s total RPS procurement claimed, RPS procurement claims determined to be ineligible for the RPS, total RPS-eligible procurement, and total annual retail sales. Details of these claims and the verification findings are listed in Appendix C: Retail Sellers’ Modified RPS Track Forms.

Without evidence to the contrary, the Energy Commission recommends that the CPUC count the amount listed as Procurement Eligible Toward the APT in Table 2 to count toward satisfying PG&E’s RPS obligations for the respective years.

Procurement From Facilities Without RPS-Certification ²	19,826,000	0	0	0	0
Procurement From Facilities for Which Procurement Claims Exceed Generation by 5 Percent or Greater ³	0	0	0	0	0
Procurement From Distributed Generation Facilities ⁴	0	0	0	0	0
Procurement of Non-Bundled Energy ⁵	0	0	0	0	0
Procurement Eligible Toward the APT ⁶	6,639,625,743	7,953,639,355	8,660,061,189	8,706,601,484	9,118,029,879
Annual Retail Sales ⁷	75,320,000,000	71,099,363,000	73,616,302,000	72,726,638,691	76,692,369,847

¹ This amount was reported to the Energy Commission by the retail seller on the RPS-Track form.

² Facilities must be certified as RPS-eligible with the California Energy Commission for procurement to be counted toward RPS targets. The numbers listed in this row represent PG&E RPS procurement claims from Nove Investments and Georgia Pacific Corporation facilities.

³ Procurement from each facility was compared to generation reported to either the U.S. Energy Information Administration or various reporting programs at the Energy Commission for that facility. For facilities where there was more than one data source available for the generation amount, the highest one was selected. In some cases, without documentation to support the RPS procurement claim, such as an invoice, the procurement amount exceeding the generation claim is not counted.

⁴ Procurement from distributed generation facilities is not eligible at this time. Page 4 of the *RPS Eligibility Guidebook* states the following: "The CPUC issued a final decision (D.07-01-018)...on January 11, 2007, that allows distributed generation system owners to retain 100percent of the RECs associated with the distributed generation energy produced...the Energy Commission will certify distributed generation as RPS eligible only if and when the CPUC authorizes applying tradable RECs toward RPS obligation."

⁵ Page 3 of the *RPS Eligibility Guidebook* states that RECs and energy must be procured together as a 'bundled' commodity to be eligible for the California RPS.

⁶ This is the total RPS procurement for each year that excludes ineligible RPS procurement claims.

⁷ The CPUC uses the utility's *previous year's* retail sales number to calculate the Annual Procurement Target. This amount was reported to the Energy Commission by the retail seller on the RPS-Track form.

Southern California Edison Company

Procurement Claims From Facilities That Are Not RPS-Certified

Table 3 presents SCE procurement claims from facilities that are not RPS-eligible.

All of SCE's procurement claims except four were from RPS-certified facilities. Two facilities from which SCE claimed procurement have had their RPS certification revoked: Edwin Curtis solar energy system and Hanson Aggregates facility. SCE investigated the Edwin Curtis solar energy system, found it to be dysfunctional and informed Energy Commission staff that all Edwin Curtis claims should be removed. In the case of Hanson Aggregates, Energy Commission staff determined that the technology was not eligible for RPS purposes and revoked the facility's certification. Claims from both of these facilities began in 2001 and continued through 2006. Adjustments have been made to each year listing the amount of procurement associated with these claims as ineligible. Reducing these two claims also reduces SCE's baseline amount. Also listed as ineligible are two 2001 facility claims that were never certified, Aliso Water Management Agency and G Squared Energy (Alamitos).

Staff inadvertently counted SCE's Mountain View claims in previous *Verification Reports*. Because these claims have now been determined ineligible, SCE's claims made for 2003-2006 from the Mountain View facilities are listed as such in this report. The terms and conditions in the DWR energy contract that SCE was assigned to manage during the California energy crisis explicitly excluded the environmental attributes, which makes the claims unbundled and, therefore, ineligible purchases.⁴⁵

The Mountain View claims issue was discussed in detail at the March 26, 2009, RPS Procurement Verification Data Review staff workshop. After the workshop, SCE provided several different policy options for the Energy Commission to consider; most options focused on allowing procurement claims from Mountain View facilities in some form. Some of the options included allowing SCE to purchase additional RECs from the voluntary market to make up for original Mountain View RECs that had been sold on the voluntary market. However, allowing the use of unbundled RECs for RPS compliance would violate current RPS rules. For a detailed discussion on the Mountain View procurement claims, see Appendix A: IOU Procurement From Facilities Under Contract With the Department of Water Resources for California's RPS Program.

⁴⁵ The DWR - Mountain View contract can be found at: www.cers.water.ca.gov/pdf_files/power_contracts/mountain_view/092002_pge_et_amended_ppa.pdf See page 4 - "Special Conditions: All rights and interests in the renewable attributes, emission reductions or credits (offsets) relating to the Projects shall remain the property of Party A." Name ("PG&E Energy Trading - Power, L.P." or "Party A")

RPS Procurement Overclaims

In September 2007, SCE requested that Energy Commission staff accept several modifications to the RPS data that SCE previously reported for 2001-2007. When reviewing the revised claims using the new RPS database, staff identified overclaims from previous years that had not been previously addressed, including the following number of overclaims: four from 2001; eleven from 2003; seven from 2004; and six from 2005. No overclaims were identified from 2006.

Generation data for a particular facility may not always match the procurement claim for that same facility because of reporting irregularities. Staff contacted some of the owners of the facilities showing large overclaims from these years to investigate SCE's overclaims. Staff was informed that, in some cases, SCE procured from two separate qualifying facilities⁴⁶ (QFs) under the same QF identification number; however, the separate QFs reported generation individually to the EIA. In such cases, there may be two EIA numbers associated with one procurement claim, yet Energy Commission staff is aware of only one EIA number and assumes it is a single facility. Further complicating the issue is that some facilities report deliveries from multiple QFs under a single EIA number. Consequently, it is possible that some procurement claims show as overclaims, while others show as underclaims, yet staff focuses only on procurement claims that exceed generation by more than 5 percent. If all of the appropriate identification numbers were known, Energy Commission staff could sum the totals of the procurement claims and sum the generation data as an alternative way to identify possible overclaims.

SCE provided supporting information for all of the overclaims. In some cases, SCE provided invoices and in other cases SCE provided actual meter data. The Energy Commission accepted the supporting documentation and the revised claims. In the original request to the Energy Commission to submit revised data, SCE noted that:

"SCE has a group of older geothermal and biomass projects in the IID's service area, which transmit their power to SCE through IID's transmission system. Previously, SCE included the scheduled quantity of generation at the IID/SCE interchange point, consistent with invoice data. However, as the rules for WREGIS were developed, it became clear that one of WREGIS' objectives was to use independent, verifiable and reliable data. As stated in the WREGIS operating rules published June 4, 2007, data collected by WREGIS will include meter information from Qualified Reporting Entities. For the group of projects in IID territory for which it had previously reported scheduled data, SCE is now reporting meter data."⁴⁷

⁴⁶ A *qualifying facility* (QF) is a generating facility which meets the requirements of a qualifying small power production facility under the Public Utility Regulatory Policies Act of 1978 ([PURPA](#)) and the Federal Energy Regulatory Commission's Regulations ([18 C.F.R. Part 292](#)), and which has obtained certification of its QF status. <http://www.ferc.gov/industries/electric/gen-info/qual-fac/what-is.asp>

⁴⁷ Email sent to Energy Commission staff at RPSTrack@energy.state.ca.us from Gary Allen at SCE on 9/07/2007.

SCE also made adjustments to claims from certain small hydroelectric (hydro) and qualifying facilities, removing “station-use figures” from the totals when the generating facilities were out of operation and the station-use amount was being supplied by grid electricity and not from the renewable facility itself. These adjustments resulted in upward shifts in SCE’s procurement claims. In cases where there was an overclaim for these types of facilities, SCE provided California ISO or Imperial Irrigation District (IID) hourly meter data to support the claims. When the Energy Commission staff compared the claims to the sum total of the meter-read data, the claims were substantiated and accepted.

Table 4 shows SCE’s total RPS procurement claimed, RPS procurement claims determined by the Energy Commission to be either eligible or ineligible toward the APT, and total annual retail sales. Details of SCE’s claims and of the verification findings are found in SCE’s appendix. Without evidence to the contrary, the Energy Commission recommends that the CPUC count the amount listed as Procurement Eligible Toward the APT in Table 4 to count toward satisfying SCE’s RPS obligations.

**Table 3:
SCE Ineligible RPS-Procurement**

Facility Name	Fuel Type	Reason Ineligible	Procurement (kWh)				
			2001	2003	2004	2005	2006
Hanson Aggregates WRP, Inc.	Biomass	Not RPS-certified	10,708	17,281	11,054	1	3,804

**Table 4:
Southern California Edison Summary of RPS Procurement (kWh) by Year**

	2001	2003	2004	2005	2006
Total RPS Procurement Claimed ¹	11,127,101,781	12,612,689,996	13,373,551,203	13,037,979,974	12,705,763,486
Procurement From Facilities Without RPS-Certification ²	722,072	24,845	17,823	6,320	9,637
Procurement From Facilities for Which Procurement Claims Exceed Generation by 5 Percent or Greater ³	0	0	0	0	0
Procurement From Distributed Generation Facilities ⁴	0	0	0	0	0
Procurement of Non-Bundled Energy ⁵	0	193,879,401	193,425,173	219,590,257	221,593,749
Procurement Eligible Toward the APT ⁶	11,126,379,709	12,418,785,750	13,180,108,207	12,818,383,397	12,484,160,100
Annual Retail Sales ⁷	74,808,598,688	70,616,552,902	72,964,152,898	74,994,454,104	78,863,139,433

¹ This amount was reported to the Energy Commission by the retail seller on the RPS-Track form.

² Facilities must be certified as RPS-eligible with the California Energy Commission for procurement to be counted toward RPS targets. The combined total represents the claims from Aliso Water Management Agency and G Squared Energy (Alamitos) for 2001 and from Hanson's Aggregates and Edwin Curtis for 2001-2006.

³ Procurement from each facility was compared to generation reported to either the U.S. Energy Information Administration or various reporting programs at the Energy Commission for that facility. For facilities where there was more than one data source available for the generation amount, the highest one was selected. In some cases, unless the retail seller provides documentation to support the RPS procurement claim, such as an invoice, the procurement amount exceeding the generation claim is not counted.

⁴ Procurement from distributed generation facilities is not eligible at this time. Page 4 of the *RPS Eligibility Guidebook* states the following: "The CPUC issued a final decision (D.07-01-018) on January 11, 2007, that allows distributed generation system owners to retail 100 percent of the RECs associated with the distributed generation energy produced...the Energy Commission will certify distributed generation as RPS eligible only if and when the CPUC authorizes applying tradable RECs toward RPS obligation."

⁵ Page 3 of the *RPS Eligibility Guidebook* states, RECs and energy must be procured together as a 'bundled' commodity to be eligible for the California RPS. These numbers represent the Mountain View I & II facilities claims from an unbundled contract.

⁶ This is the total RPS procurement for each year that excludes ineligible RPS procurement claims.

⁷ The CPUC uses the utility's previous year's retail sales number to calculate the Annual Procurement Target. This amount was reported to the Energy Commission by the retail seller on the RPS-Track form.

Source: RPS staff analysis of SCE's 2001, and 2003-2006 CEC-RPS-TRACK forms.

San Diego Gas & Electric Company

All of SDG&E's RPS claims in 2005 and 2006 were for generation from RPS-certified facilities. However, for 2001-2004, SDG&E's procurement claims from the Cal West Industrial Park are listed as ineligible because these claims are from a distributed generation facility. As noted on page 4 of the *RPS Eligibility Guidebook*: "The CPUC issued a final decision (D.07-01-018) on January 11, 2007, that allows distributed generation system owners to retain 100 percent of the RECs associated with the distributed generation energy produced...the Energy Commission will certify distributed generation as RPS-eligible only if and when the CPUC authorizes applying tradable RECs toward RPS obligations." Consequently, SDG&E's claims from this facility are not eligible. This adjustment changes SDG&E's baseline.⁴⁸

Additionally, in the verification process using the new database, staff identified overclaims from SDG&E in 2005 and 2006, both from the Badger Creek Filtration Plant. The 2006 invoice amount matched the procurement claim, but the 2005 invoice amount was lower than the RPS procurement claim. SDG&E investigated the difference and informed staff that in January 2005, the correct procurement amount should have been 7,109 kWh, not 71,000 kWh, rendering the difference 63,891 kWh, as an ineligible procurement amount. SDG&E's claim has been adjusted accordingly. SDG&E's ineligible procurement claims are shown in Table 5.

Table 5:
SDG&E Ineligible RPS-Procurement

Facility Name	Fuel Type	Reason Ineligible	Procurement (kWh)				
			2001	2003	2004	2005	2006
Cal West Industrial Park	Photovoltaic	Not RPS certified	112,861	111,595	114,195	0	0
Badger Creek Filtration Plant	Small Hydro	Overclaim	0	0	0	63,891	0
Total			112,861	111,595	114,195	63,891	0

Source: RPS staff analysis of SDG&E's 2001, and 2003-2005 CEC-RPS-TRACK forms.

During the verification process for this report, Green-e staff responsible for tracking Green-e voluntary market REC transactions and Energy Commission staff shared data and identified REC claims for the Minnesota Methane (MM) San Diego LLC facility in the voluntary REC market, which, when added with the procurement claims from SDG&E, resulted in an overclaim. For 2006, EIA data showed 50,733 MWh attributed to the MM San Diego facility. SDG&E made an RPS procurement claim of 31,277 MWh from that facility. Green-e provided data showing that 15,000 MWh of voluntary market RECs and 7,593 MWh of other marketer sales were also being claimed. The sum of these claims is 53,870 MWh, which is higher than the generation reported to EIA for this facility.

⁴⁸ See Section 1: Renewables Portfolio Standard Procurement Targets-Large IOUs for information on Incremental Procurement Baseline Amounts, page 6, as well as Table 10 RPS Baseline Procurement Amounts for IOUs for SDG&E's revised baseline amount, page 41.

Because of a possible overclaim, SDG&E provided Power Purchase Statements and Master Power Purchase and Sale Agreement Confirmation Letters to support its 2006 claim. Minnesota Methane facilities informed staff that there are two separate facilities with two separate EIA numbers that are both called MM San Diego: MM San Diego LLC – Miramar (EIA #55094) and MM San Diego LLC – North City (EIA #55602). The owners of the MM San Diego facilities provided Energy Commission staff with the EIA filings for both of these facilities and explained that the Miramar facility supplied SDG&E with their contracted 31,277 MWh of bundled RECs and energy and that the voluntary REC claims were from a different facility, North City.⁴⁹

The 31,277 MWh claimed by SDG&E is less than the 50,733 MWh amount reported to EIA for the MM San Diego LLC – Miramar facility. With clarification about the two MM facilities, the only RPS claim being made from this particular facility is from the SDG&E bundled energy contract for 31,277 MWh, and there is no longer concern of an overclaim.

Table 6 shows a summary of SDG&E's total RPS procurement claimed, RPS procurement claims determined by the Energy Commission to be either eligible or ineligible toward the APT, and total annual retail sales. Details of SCE's claims and of the verification findings are found in Appendix C: Retail Sellers' Modified RPS Track Forms. Without evidence to the contrary, the Energy Commission recommends that the CPUC count the amount listed as Procurement Eligible Toward the APT in Table 6 to count toward satisfying SDG&E's RPS obligations.

⁴⁹ North City is a newer facility that is certified to sell RECs through Green-e's voluntary market program. The North City facility supplied 7,593 MWh of RECs to the city of San Diego in 2006. The 15,000 MWh of voluntary market RECs was generated from the North City facility. Together, the North City Facility's voluntary REC market claims equal 22,593 MWh, which is less than the 31,092 MWh reported to the EIA for the North City facility.

**Table 6:
SDG&E Summary of RPS Procurement (kWh) by Year**

	2001	2003	2004	2005	2006
Total RPS Procurement Claimed ¹	145,759,942	549,967,482	677,966,293	825,365,642	899,520,474
Procurement From Facilities Without RPS-Certification ²	0	0	0	0	0
Procurement From Facilities for Which Procurement Claims Exceed Generation by 5 Percent or Greater ³	0	0	0	63,891	0
Procurement From Distributed Generation Facilities ⁴	112,861	111,595	114,195	0	0
Procurement of Non-Bundled Energy ⁵	0	0	0	0	0
Procurement Eligible Toward the APT ⁶	145,647,081	549,855,887	677,852,098	825,301,751	899,520,474
Annual Retail Sales ⁷	14,998,806,069	15,043,864,828	15,811,590,813	16,001,515,545	16,846,887,927

¹ This amount was reported to the Energy Commission by the retail seller on the RPS-Track form.

² Facilities must be certified as RPS-eligible with the Energy Commission for procurement to be counted toward RPS targets.

³ Procurement from each facility was compared to generation reported to either the U.S. Energy Information Administration or various reporting programs at the Energy Commission for that facility. For facilities where there was more than one data source available for the generation amount, the highest one was selected. In some cases, unless the retail seller provides documentation to support the RPS procurement claim, such as an invoice, the procurement amount exceeding the generation claim is not counted.

⁴ Procurement from distributed generation facilities is not eligible at this time. Page 4 of the *RPS Eligibility Guidebook* states the following: "The CPUC issued a final decision (D.07-01-018) on January 11, 2007, that allows distributed generation system owners to retail 100percent of the RECs associated with the distributed generation energy produced...the Energy Commission will certify distributed generation as RPS eligible only if and when the CPUC authorizes applying tradable RECs toward RPS obligation." This row shows the claim from Cal West Industrial Park, which is distributed generation and currently ineligible for RPS.

⁵ Page 3 of the *RPS Eligibility Guidebook* states that RECs and energy must be procured together as a 'bundled' commodity to be eligible for the California RPS.

⁶ This row is the total RPS procurement for each year that excludes ineligible RPS procurement claims.

⁷ The CPUC uses the utility's previous year's retail sales number to calculate the Annual Procurement Target. This amount was reported to the Energy Commission by the retail seller on the RPS-Track form.

Source: RPS staff analysis of PG&E's 2001, and 2003-2006 CEC-RPS-TRACK forms.

PacifiCorp

At the March 26, 2009, RPS Procurement Verification Data Review Workshop, staff addressed the issue of PacifiCorp having made RPS claims from facilities not yet RPS-certified. As noted in the *RPS Guidebook, Third Edition*, the Energy Commission will verify that the RPS procurement reported in the CEC-RPS-Track form is certified. This is done to ensure that procurement counted toward a retail sellers RPS obligations is from an eligible renewable resource.

Following the workshop, PacifiCorp, working with Energy Commission staff, applied for certification for the facilities claimed on its CEC-RPS-Track forms and for which it had not yet submitted applications for RPS certification. For 2001-2006, out of all of the facilities for which PacifiCorp has applied for RPS certification and claimed for RPS purposes, only one facility, Blundell 1, has a pending RPS certification application. All of the other facilities have been RPS-certified. It is anticipated that this facility will be certified by the time this *Verification Report* becomes final and that it will be eligible toward PacifiCorp's RPS obligations. However, because it was not RPS-certified at the time of the writing of this report, it is counted as ineligible.

While PacifiCorp claims output from facilities that are technically located out of state, in several cases, PacifiCorp has applied for certification using a provision in Public Utilities Code Section 399.17. This provision exempts multijurisdictional utilities from out-of-state delivery requirements, with the limitation that no other utility can claim the facility's generation for RPS procurement. PacifiCorp has certified nine facilities as "out-of-state" facilities, which allows other RPS obligated retail sellers to claim output from the facilities for RPS purposes. Three more PacifiCorp facilities have pending applications for out-of -state certification. Two of these have on-line dates starting in 2007 and are, therefore, not claimed for reporting years covered in this report.

As a multijurisdictional utility, PacifiCorp serves customers in California, Idaho, Oregon, Utah, Washington, and Wyoming.⁵⁰ For most of its facilities, PacifiCorp reports procurement using a "system resource" allocation approach, which has been defined under a multistate protocol to determine how the costs, revenues, and generation associated with PacifiCorp facilities are allocated to each state PacifiCorp serves. This means that for each of PacifiCorp's facilities, that a certain percentage of procurement is allocated to each of the six states, representing that state's share of the resource from PacifiCorp's "total system resource" level (all of PacifiCorp's resources from every state it serves).

Some of PacifiCorp's listed facilities fall under a unique treatment in the multistate protocol for pre-2004 contracts with a QF. These pre-2004 QF contracts are not allocated as system resources. Instead, 100 percent of costs, generation, and associated REC output are allocated to the state where the facility is located throughout the duration of the QF contract. These QF facilities are

⁵⁰ <http://www.pacifiCorp.com/>

considered “in situs” or state-allocated facilities and, while they are counted as part of PacifiCorp’s “total system resource,” 100 percent of the costs and generation are allocated to the state where it is located instead of having a percentage of the costs and generation allocated to each of the states that PacifiCorp serves. The distinction between “system resource” and “in situs” resource is most relevant to California and Oregon because PacifiCorp reports to these states at the resource (or facility) level for public disclosure, and these facilities then may be represented in publicly available power content labels.

Energy Commission staff verified, to the extent possible, that the RPS procurement claimed by PacifiCorp for California RPS was not also claimed in other states. In years past and with funding from a U.S. Department of Energy grant, Energy Commission staff collaborated with staff from energy agencies in Oregon and Washington to develop an energy information tracking system. This tracking system enables the various state representatives who administer power source disclosure programs to determine if procurement is claimed in more than one of the participating states and if combined procurement amounts exceed generation. Using this tracking system for RPS verification, staff worked with energy staff from Oregon and Washington to examine multistate procurement claims.

A representative from Washington State University, where the tracking system is housed, provided data showing PacifiCorp made six procurement claims from California RPS certified facilities in both California and Oregon.⁵¹ Energy Commission staff then compared the sum of the procurement claims from these facilities with total generation data from EIA. For one of the facilities, the total amount of procurement exceeded the generation.

PacifiCorp explained that this particular facility falls under the special state-allocated QF status. For this particular facility, while it is technically correct to assign all the procurement to California, PacifiCorp originally reported procurement from this facility using the system resource reporting approach. The original allocation to Oregon was based on the multistate protocol, and, as described above, PacifiCorp allocates resources to the six states based on a “system generation” factor. As a result, some procurement from this facility was reported to the state of Oregon, and, subsequently, the Oregon Department of Energy included the facility’s generation in public disclosure reporting for the PacifiCorp power content label for that state.

Allowing PacifiCorp to count the full amount of procurement from this QF facility for California RPS purposes would essentially result in the double-counting of the procurement previously accounted for and publicly disclosed in Oregon’s power content labels. Staff worked with PacifiCorp to resolve this issue, and PacifiCorp revised its CEC-RPS-Track forms and the amount of procurement that was originally allocated to Oregon.

⁵¹ Washington state does not have the same reporting requirements but analyzes the data provided to California and Oregon to estimate the amount of procurement being used at the resource level for Washington.

Idaho, Utah, Washington, and Wyoming do not receive resource (or facility) level reporting. Therefore, this QF facility was not reported as a specific resource for public disclosure purposes in those states, and it was not necessary to further discount procurement from this resource. However, if in the future these states develop RPS programs that allow for retroactive claims of PacifiCorp resources and this QF resource is used in any of these states for RPS purposes, the Energy Commission may remove the amount used in other states from PacifiCorp's California RPS obligations to prevent double-counting.

In June 2007, PacifiCorp submitted its initial RPS Track forms to the Energy Commission for 2001-2006. The Combine Hills wind facility was listed on these RPS Track forms with zero procurement claimed for 2001-2006. During the verification process for this report, PacifiCorp worked with staff to make various corrections to its RPS Track forms; however, PacifiCorp revised this facility's procurement amounts without specifically mentioning these changes to staff. With the revised RPS Track forms submitted on May 22, 2009, and thereafter, PacifiCorp added procurement amounts to the Combine Hills claims for 2003-2007,⁵² along with a comment in the Excel® spreadsheet that is visible only upon selection of "show/hide comment" or "show all comments":

"p10991:

RECs owned by Energy Trust of Oregon & allocated to PacifiCorp for OREGON ONLY."

Staff has determined the procurement amounts for Combine Hills to be ineligible for California RPS compliance because they do not include the RECs, making this an unbundled, energy-only claim. Energy and RECs procured together is a requirement for all RPS procurement. Also, because the RECs are allocated for Oregon, counting the procurement for California RPS would allow for double-counting, which the Energy Commission is mandated to guard against.

Oregon Department of Energy staff is reviewing all of the facilities that PacifiCorp has claimed in California to ensure that no other facilities that PacifiCorp has claimed for California RPS have RECs assigned to Oregon. If any other such procurement claims are identified, those procurement amounts will be counted as ineligible in the *Final Verification Report*, unless PacifiCorp revises its RPS-Track forms to remove such claims.

PacifiCorp's ineligible RPS procurement claim is shown in Table 7. The Blundell facility has a pending RPS certification application and is expected to be certified by the time this report becomes final. Because it is currently not RPS-certified, staff lists the facility as ineligible.

Table 8 shows PacifiCorp's total RPS procurement claimed, RPS procurement claims determined by the Energy Commission to be either eligible or ineligible toward the APT, and total annual retail sales. Details of PacifiCorp's claims and of the verification findings are found in PacifiCorp's appendix. Without evidence to the contrary, the Energy Commission recommends that the CPUC count the amount listed as Procurement Eligible Toward the APT in Table 8 to count toward satisfying PacifiCorp's RPS obligations.

⁵² This *Draft Verification Report* does not cover 2007; staff is focusing only on years up to 2006.

**Table 7:
PacifiCorp Ineligible RPS-Procurement**

Facility Name	Fuel Type	Reason Not Certified	Procurement (kWh)				
			2001	2003	2004	2005	2006

PacifiCorp Summary of RPS Procurement (kWh) by Year**

	2001	2003	2004	2005	2006
Total RPS Procurement Claimed ¹	43,181,694	65,498,511	59,730,720	64,509,961	73,082,799
Procurement From Facilities without RPS-Certification ²	2,709,431	3,641,116	3,729,434	3,472,592	3,512,128
Procurement From Facilities for Which Procurement Claims Exceed Generation by 5 Percent or Greater ³	0	0	0	0	0
Procurement From Distributed Generation Facilities ⁴	0	0	0	0	0
Procurement of Non-Bundled Energy ⁵	0	61,986	2,277,688	1,868,743	2,224,633
Procurement Eligible Toward the APT ⁶	40,472,263	61,795,409	53,723,598	59,168,626	67,346,038
Annual Retail Sales ⁷	787,150,000	834,702,000	841,849,000	836,674,000	851,205,000

¹ This amount was reported to the Energy Commission by the retail seller on the RPS-Track form.

² Facilities must be certified as RPS-eligible with the California Energy Commission for procurement to be counted toward RPS targets.

³ Procurement from each facility was compared to generation reported to either the Federal Energy Information Administration or various reporting programs at the Energy Commission for that facility. For facilities where there was more than one data source available for the generation amount, the highest one was selected. In some cases, unless the retail seller provides documentation to support the RPS procurement claim, such as an invoice, the procurement amount exceeding the generation claim is not counted.

⁴ Procurement from distributed generation facilities is not eligible at this time. Page 4 of the *RPS Eligibility Guidebook* states the following: "The CPUC issued a final decision (D.07-01-018)...on January 11, 2007, that allows distributed generation system owners to retail 100% of the RECs associated with the distributed generation energy produced...the Energy Commission will certify distributed generation as RPS-eligible only if the CPUC authorizes applying tradable RECs toward RPS obligation."

⁵ Page 3 of the *RPS Eligibility Guidebook* states, RECs and energy must be procured together as a 'bundled' commodity to be eligible for the California RPS.

⁶ This will be total is the total RPS procurement for each year that excludes ineligible RPS procurement claims.

⁷ The CPUC uses the utility's previous year's retail sales number to calculate the Annual Procurement Target for that facility. This amount was reported to the Energy Commission by the retail seller on the RPS-Track form.

*In cases where staff did not have previous year's retail sales numbers reported to us, we used the annual retail sales number reported by retail sellers on the CPUC compliance reports found at: <http://www.cpuc.ca.gov/PUC/energy/Renewables/compliance.htm>

Source: RPS staff analysis of PacifiCorp's 2001, and 2003-2006 CEC-RPS-TRACK forms.

Energy Service Providers

An energy service provider (ESP—also known as electric service provider) is a non-utility entity that offers electric service to customers in the service territories of the IOUs. In 2006, there were 7 ESPs serving load in California, who made a total of 32 RPS procurement claims for 2001-2006. All RPS procurement claims were made from RPS-eligible facilities, and, overall, there were only a few issues associated with these claims.

In the verification process, staff identified a 9.4 percent overclaim by Sempra Energy Solutions for the Angels Unit Conduit Hydroelectric facility. Sempra Energy Solutions claimed 5,962,061 kWh in 2004, but generation data showed only 5,400,000 kWh, resulting in an apparent overclaim of 562,061 kWh. Staff requested documentation to support the claim, and Sempra provided copies of the Energy Commission's Certificates of Specific Generation. These certificates are created by the generator using software provided by the Energy Commission in accordance with the Power Source Disclosure Program and the Energy Commission's regulations (20 CCR Sections 1390-1394), and each certificate represents a claim on the output of the generator in an amount stated on the certificate. The four certificates that Sempra Energy Solutions submitted covered the time span of January – December 2004 for a total of 5,962,061 kWh. Sempra Energy Solutions staff also provided a Power Deal Ticket from Utica Power Authority (representing the Angels Unit facility) documenting energy sold during this same period. The energy amounts on the Power Deal Ticket, which is an agreement between an energy supplier and a purchaser for specific amounts of power over specific periods, matched the energy amounts and time periods shown on the certificates, and staff determined that the claim was acceptable. However, retail sellers are cautioned about using certificates as proof of an RPS-eligible procurement claim; the Certificates of Specific Generation Program was designed to support the Power Source Disclosure Program. In future Verification Reports, the Energy Commission will not accept unauthorized certificates.⁵³

As mentioned in PG&E's RPS Procurement Verification Results section, a procurement overclaim for Calpine Unit 13 was identified during the verification process. In 2006, Direct Energy Business (formerly Strategic Energy) and APS Energy Services both claimed RPS procurement from Calpine Unit 13, and when combined with PG&E's procurement claim from Calpine Unit 13, the total RPS procurement amount exceeded reported generation. Direct Energy and APS submitted documentation supporting their RPS procurement claims. Energy Commission staff, in coordination with PG&E and Calpine, identified that the PG&E claim was actually the sum of procurement from two Calpine units. After the correct (and lesser) amount of PG&E procurement was allocated to Calpine Unit 13, the overclaim concern was resolved.

⁵³ Facilities providing Certificates of Specific Generation to customers should make sure that they are using valid generation numbers for the certificates by periodically checking with Energy Commission staff in the Renewable Energy Office.

Table 9 shows a summary of the ESPs' total RPS-eligible procurement claimed as well as the total annual retail sales. Details of the individual ESPs' claims and of the verification findings are found in Appendix C: Individual Retail Sellers' Modified RPS Track Forms. Without evidence to the contrary, the Energy Commission recommends that the CPUC count the amount listed as Total RPS Procurement Claimed by each ESP toward satisfying the individual ESP RPS obligations.

**Table 9:
ESP Aggregated Summary of RPS Procurement (kWh) by Year**

RPS Procurement Claims	2001	2003	2004	2005	2006
3Phases Energy Services ¹	2,200,000			47,709,000	
APS Energy Services ¹					110,450,000
Calpine PowerAmerica-CA ¹					8,760,000
Constellation NewEnergy ¹			4,400,000	10,056,000	85,825,000

Procurement From Facilities Without RPS-Certification ²	0	0	0	0	0
Procurement Claims Exceed Facility Generation by 5 Percent or Greater ³	0	0	0	0	0
Procurement From Distributed Generation Facilities ⁴	0	0	0	0	0
Procurement of Unbundled Energy ⁵	0	0	0	0	0
<i>Total Disallowances</i>	0	0	0	0	0
Total Aggregated ESP Procurement Eligible Toward the APT⁶	2,200,000	6,733,310	24,945,360	136,406,359	396,084,550

¹ This amount was reported to the Energy Commission by the retail seller on the RPS-Track form.

² Facilities must be certified as RPS-eligible with the California Energy Commission for procurement to be counted toward RPS targets.

³ Procurement from each facility was compared to generation reported to either the U.S. Energy Information Administration or various reporting programs at the Energy Commission for that facility. For facilities where there was more than one data source available for the generation amount, the highest one was selected. In some cases, unless the retail seller provides documentation to support the RPS procurement claim, such as an invoice, the procurement amount exceeding the generation claim is not counted.

⁴ Procurement from distributed generation facilities is not eligible at this time. Page 4 of the *RPS Eligibility Guidebook* states the following: "The CPUC issued a final decision (D.07-01-018)...on January 11, 2007, that allows distributed generation system owners to retain 100percent of the RECs associated with the distributed generation energy produced...the Energy Commission will certify distributed generation as RPS eligible only if and when the CPUC authorizes applying tradable RECs toward RPS obligation."

⁵ Page 3 of the *RPS Eligibility Guidebook* states, RECs and energy must be procured together as a 'bundled' commodity to be eligible for California RPS.

⁶ This will be the total RPS procurement for each year that excludes ineligible RPS procurement claims. For ESPs, the total amount claimed is the total amount eligible by ESP because all of the claims were determined to be RPS-eligible.

Source: RPS staff analysis of 2001, and 2003-2006 CEC-RPS-TRACK forms submitted by 3Phases Energy Service, APS Energy Service, Calpine PowerAmerica-CA, Constellation NewEnergy, Pilot Power Group, Sempra Energy Solutions, and Strategic Energy.

Initial Baseline Procurement Amount

The Initial Baseline Procurement Amount (IBPA) represents the amount of renewable generation that must be retained in a retail seller's portfolio to continue to meet its RPS targets.

The IBPA is described in detail in Section 1: Introduction. For each retail seller participating in the RPS program, the CPUC sets an annual procurement target (APT) denoting the amount of renewable energy that the entity must procure each year.⁵⁴ The APT is the percentage of renewable energy from retail sales an LSE must procure in a given year. The Energy Commission is providing a table of IBPAs because procured renewable energy is used in the APT formula. The formula tables used to calculate the baseline amounts in Tables 10-12 below are provided in Attachment B: Retail Seller Initial Baseline Procurement Amounts.

The following set of tables provides the IBPAs for all retail sellers making procurement claims in 2001-2006. Staff has prepared the following IBPA tables based on: 1) RPS-eligible procurement data; 2) retail sales data; and 3) the CPUC's formula for calculating the IBPA.

Table 10:
RPS Baseline Procurement Amounts for IOUs

IOU	2003 RPS Baseline Procurement Amount (kWh)
PG&E	7,020,767,192
SCE	11,250,977,300

Sempra Energy Solutions	0
Strategic Energy	0

Source: RPS staff analysis of 2001 and 2003 CEC-RPS-TRACK forms we received from the ESPs listed in the table.

As a result of updated verification findings included in this *Verification Report*, the baselines for the IOUs have changed from what was reported in previous *Verification Reports*.

**Table 13:
Comparison of RPS Baseline Procurement Amounts**

Investor Owned Utility	Baseline based on 2005 Verification Report(MWh*)	Baseline based on 2006 Verification Report(MWh)
PG&E	7,096,147	7,020,767
SCE	11,184,922	11,250,977
SDG&E	296,186	296,073
*The 2005 Verification Report provided IBPAs in MWh; there may slight differences in the amounts reported in Table 13 above due to rounding from kWh to MWh.		

Source: 2005 RPS Verification Report, August 2007, pg. 20, 23, and 29, CEC-300-2007-001-CMF.

The IBPAs reported in this *Verification Report* should be used by retail sellers in compiling updated verified compliance reports for the CPUC⁵⁵. The verified compliance reports should be revised as applicable based on the verified procurement findings in this report for 2001 and 2003-2006.

Verification of Delivery Requirement

Under the Energy Commission's *RPS Eligibility Guidebook, Third Edition*, to count generation procured from an out-of-state RPS-eligible facility for RPS-compliance, the facility must enter a power purchase agreement with the retail seller, procurement entity, or third party, and a matching amount of energy must be delivered to California. In accordance with the policies of the North American Electricity Reliability Council (NERC), electricity delivered across control areas must be tagged with what is commonly referred to as a "NERC tag." NERC tags require,

⁵⁵ The data used to determine the IPBAs is derived from self-reported data and is subject to change if the Energy Commission learns of new and/or more accurate information.

among other things, that information be provided identifying the Generation Providing Entity, the “source” or “Point of Injection,” the physical transmission path for delivery, the contract or market path, the location to which the electricity will be delivered (“sink” or “Point of Withdrawal”), and the load-serving entity responsible for the consumption of electricity delivered. Under the *RPS Eligibility Guidebook, Third Edition*, the Energy Commission requires summary reports of NERC tag transactions to document delivery of electricity from out-of-state facilities. The delivery requirements do not apply to facilities located outside California but whose first point of interconnection to the WECC transmission system is located in California; the generation from these facilities is deemed delivered for purposes of the RPS.

In 2001 and 2003-2006, SCE made the only two procurement claims from RPS-certified facilities located out-of-state, from Caithness Dixie Valley, LLC, and Beowawe Power, LLC. Staff verified from interconnection diagrams that although Dixie Valley is physically located outside California, its first point of interconnection is in California, which exempts it from the out-of-state delivery requirements. Additionally, the Nevada PUC confirmed that all of Dixie Valley's output is under contract with SCE, and none of its generation has been purchased by retail sellers in Nevada.

Beowawe Power, LLC, is a geothermal facility located in Eureka County, Nevada, with its first point of interconnection to the WECC transmission system located in Nevada (NV Energy service territory). SCE initially applied for RPS certification for the Beowawe Power, LLC, facility when the August 2004 version of the *RPS Eligibility Guidebook* was in effect. In that version of the *RPS Eligibility Guidebook*, there was no restriction on out-of-state facility eligibility with respect to the facility's on-line date unless it was also seeking supplemental energy payment (SEP) funds.⁵⁶ Further, at that time the applicant's demonstration that the out-of-state facility will not cause or contribute to a violation of California's environmental standards or regulations was only required if the facility was seeking both RPS certification and SEP funds. Therefore, under that version of the *RPS Eligibility Guidebook*, SCE was able to apply for certification for and claim RPS-eligible generation from the Beowawe Power, LLC, facility. SCE claimed such generation through December 31, 2005, and at the end of 2005, SCE's contract with Beowawe Power, LLC, expired and was not renewed. SCE has not made any RPS claims from this facility for 2006.

Staff checked with the Nevada PUC to see if procurement from Beowawe Power, LLC, had been reported to Nevada, and received the amount of procurement claimed in Nevada over 2001 and 2003-2006. Staff added these amounts to the procurement amounts claimed in California for these years. The sum of the procurement claims from the two states did not exceed the amount of generation for the facilities, so there were no concerns of overclaims or double-counting from this facility.

⁵⁶ The *RPS Eligibility Guidebook, Third Edition*, requires out-of-state facilities to commence commercial operations on or after January 1, 2005, and to demonstrate that the facility will not violate California's environmental standards and regulations. These requirements were put in place to address changes in the law resulting from SB 107 (Stats.2006,Ch. 464, Sec. 3).

As mentioned above under the RPS Procurement Verification Findings for PacifiCorp, while PacifiCorp is claiming from facilities that are technically located out of state, PacifiCorp has applied for in-state RPS certification subject to the provisions in Public Utilities Code Section 399.17. These provisions exempt out-of-state facilities serving multi-jurisdictional utilities with 60,000 or fewer customer accounts from the out-of-state eligibility requirements, with the limitation that only that multi-jurisdictional utility can claim the generation from that facility for its own RPS procurement purposes.

For this *Verification Report*, there are no other out-of-state facilities requiring verification of delivery requirements.

SECTION 4: Procurement Verification Analysis

Availability of Generation Data to Verify RPS-Eligible Procurement

Staff strives to verify RPS procurement claims with generation data reported to the U.S. Energy Information Administration (EIA) and/or to various programs within the Energy Commission. In some cases, as noted earlier in this report, Energy Commission staff requested and received supporting information, such as retail seller invoices, to verify procurement where the comparison of total procurement claims with generation data from a specific facility indicated that procurement exceeded generation by 5 percent or greater.

The availability of data to verify the RPS-eligible procurement claims falls into one of three categories: 1) generation data from various sources (EIA or Energy Commission programs); 2) retail seller supporting documentation (such as procurement invoices); and 3) procurement from utility-certified facilities for which generation data was not available. In all cases where there was no source of generation data, the facilities were utility-certified.⁵⁷

As shown in Tables 14-18, procurement was verified with generation data from EIA or the Energy Commission during 2001 and 2003-2006 for the majority of the claims, ranging from 86 percent to 98 percent of the total amount of RPS-eligible procurement claimed and accounting for approximately 67 percent to 78 percent of the number of facilities from which eligible procurement was claimed. During 2001 and 2003-2006, the absence of generation data for utility-certified procurement claims accounted for a range of 1 percent to 11 percent of the total amount of RPS-eligible procurement claimed and for approximately 22 percent to 30 percent of the number of facilities claimed. In Appendix C: Individual Retail Sellers' Modified RPS Track Forms, the individual ESPs procurement claims are listed showing the facility, fuel type, amount claimed, and other details. For ease of reading, however, staff has gathered the ESPs' data in the tables that follow. Also, the total number of facilities claimed may appear to exceed the actual number of RPS-eligible facilities being claimed for RPS purposes because some retail sellers claim from the same facility, and these individual facility claims would be represented with each retail seller claiming from that facility.

⁵⁷ As stated on page 47 in the *RPS Eligibility Guidebook, Third Edition*, the retail seller is responsible for reporting the generation data for the facilities it certifies on the facilities' behalf. This reporting requirement is satisfied through the CEC-RPS-Track forms. Therefore, for utility-certified facilities where there is no reported generation data available, the procurement amount reported on the RPS-Track form is accepted without further verification.

RPS-Eligible Procurement by Resource Type

One of the purposes of the RPS is “increasing the diversity” of California’s energy mix.⁵⁸ Because of the importance of this goal and general interest in understanding the technologies used to meet the RPS, Tables 19-23 provide information on the renewable resource mix used to generate electricity claimed by each retail seller (but aggregated for ESPs) for the RPS. The following tables list RPS-eligible procurement by resource type by the IOUs, MJU, and collected ESPs. RPS-eligible resource categories can be found on page 8 in the *RPS Eligibility Guidebook, Third Edition*. Some of the resource categories reported in earlier *Verification Reports* may have changed, as the new database allows staff to align procurement claims with the appropriate resource type, which is not always reported accurately by retail sellers on the CEC-RPS-Track forms. In some cases, retail sellers have notified staff of the appropriate resource category for particular procurement claims, and staff made adjustments to reflect the correct category. Reporting in this *Verification Report* strives for alignment with the more specific resource categories listed in the *RPS Eligibility Guidebook*.

As indicated in Table 20, PG&E procurement from biomass-fueled facilities is slightly higher than from other resource types, except in 2006, when small hydroelectric procurement exceeded other resource types.

⁵⁸ Public Utilities Code Section 399.11.

**Table 19:
PG&E's RPS-Eligible Procurement by Resource Type**

Fuel	Procurement (kWh)				
	2001	2003	2004	2005	2006

Source: RPS staff analysis of PacifiCorp's 2001 and 2003-2006 CEC-RPS-TRACK forms.

The only renewable procurement claimed by ESPs in 2001 was from biomass facilities. In 2003 and 2004, procurement from conduit hydroelectric (and incremental hydroelectric in 2004) was claimed. However, as the number of ESPs reporting increased in 2005 and 2006, the resource mix also expanded, with the main fuel source being small hydroelectric in 2005 and geothermal in 2006.⁵⁹

Table 23:

Total RPS-Eligible Specific Purchases

Tables 24 and 25 identify the total number of specific purchases (the retail seller's procurement from a specific renewable facility) from RPS-eligible facilities and the quantity of electricity procured for 2001 and 2003-2006. In total per year, the retail sellers claimed procurement from approximately 463 RPS-certified facilities in 2001, 473 RPS-certified facilities in 2003, 485 RPS-certified facilities in 2004, 482 RPS-certified facilities in 2005, and 493 RPS-certified facilities in 2006, for RPS compliance. The total number of facility claims shown here may include multiple claims on generation from the same facility, so these figures should not be considered to be the exact number of facilities with RPS procurement claims.

⁵⁹ Note that in the appendix, the individual ESPs' procurement claims are listed showing the facility, fuel type, amount claimed, and other details.

**Table 24:
2001 & 2003 Total RPS-Eligible Specific Purchases**

Utility	2001		2003	
	Number of RPS-Eligible Facilities Claimed	RPS- Eligible Procurement (kWh)	Number of RPS- Eligible Facilities Claimed	RPS-Eligible Procurement (kWh)

New and Repowered RPS Procurement

The definition of new and repowered renewable procurement in this report is based on the version of the Public Resources Code Section 25743 in place from 2003 through 2006. The Energy Commission interpreted this law as requiring an initial operation or repowering date of January 1, 2002.⁶⁰ Based on the information submitted on CEC-RPS-Track filings for procurement of generation that staff determined to be RPS-eligible, Table 26 shows that, for the retail sellers who procured generation from new and repowered RPS-eligible facilities, the amount of energy procured from these facilities grew 66 percent from 2004 to 2005 and grew another 43 percent from 2005 to 2006. Due to the re-reporting of RPS procurement claims by SCE and PG&E, the addition of the ESP and MJU procurement to this report, and database improvements allowing staff to more accurately sort data, the new and repowered RPS procurement data from 2004 and 2005 have been updated from the data provided in previous verification reports.

Table 26:
New and Repowered Renewable Procurement

Utility	2004 Procurement (kWh)	2005 Procurement (kWh)	2006 Procurement (kWh)

Source: RPS staff analysis of 2004-2006 CEC-RPS-TRACK forms received from participating retail sellers.

⁶⁰ This date has subsequently been revised to January 1, 2005, based on amendments to Public Resources Code Sections 25741 and 25743 by SB 107, which took effect on January 1, 2007.

Table 27 shows the data disaggregated by fuel type for procurement from new and repowered facilities from 2004 through 2006, with a variety of five resource types represented. Wind dominates as the largest amount of generation for each year with more than 50 percent of the total renewable procurement from new and repowered wind facilities for each year.

SECTION 5: Incremental Geothermal

Using criteria in previous editions of the *RPS Eligibility Guidebook*, the Energy Commission certified incremental geothermal capacity in previous *Verification Reports*. Because previous *Verification Reports* have not included energy service providers and small and multi-jurisdictional utilities, staff allocated all incremental geothermal procurement to the investor-owned utilities. The enactment of Senate Bill 107 eliminated the Energy Commission's responsibility to certify incremental geothermal capacity starting in 2007. Since the requirements for certifying incremental geothermal capacity existed in 2006, this report includes an estimate of the generation from incremental geothermal resources.

Generation from RPS-certified facilities that have incremental geothermal capacity has been claimed by both IOUs and ESPs. Previously, eligibility toward a retail seller's Incremental Procurement Target (IPT) was limited to generation from new RPS contracts or from incremental geothermal capacity. However, recent legislation determined that all RPS-eligible generation could count toward a retail seller's IPT.⁶¹ This section of the *2006 Verification Report* estimates the amount of energy produced and procured from capacity certified as incremental geothermal by the Energy Commission.

Because the incremental geothermal requirements have been removed starting in 2007, at the March 26, 2008, RPS Procurement Data Review workshop, staff proposed to continue to allocate all incremental geothermal procurement to the IOUs for 2006 and to discontinue the incremental geothermal analysis section from the *2007 Verification Report*. For 2006, stakeholders were asked if there would be any foreseeable problems with continuing to allocate incremental geothermal to the IOUs, as was the practice in previous *Verification Reports*. The only stakeholder response to this question noted that the allocation of the incremental geothermal procurement is not essential to any aspect of the RPS program and that there is no critical need for information relating to incremental geothermal production. Staff sees no foreseeable problems with continuing allocation of geothermal procurement to the IOUs and has taken this approach in the following analysis.

Following the criteria in the *RPS Eligibility Guidebook*, the Energy Commission certified incremental geothermal capacity for nine Calpine Geysers facilities. Originally, generation from incremental geothermal capacity was only eligible to count toward the RPS baseline or adjustment to the baseline if it was certified as incremental geothermal by the Energy Commission.⁶²

The Energy Commission certified incremental geothermal capacity at the Calpine Geysers facilities as shown in Table 28 for 2003 through 2006. In Table 28, the "Total Incremental Geothermal" columns show the amount of capacity per facility certified as incremental geothermal for that year, and the bottom row shows the amount that was disapproved for RPS

⁶¹ Decision 06-10-050 http://docs.cpuc.ca.gov/PUBLISHED/FINAL_DECISION/61025.htm

⁶² Under former Public Utilities Code Section 399.12 (a)(2), which was subsequently amended by SB 107.

certification. The table also shows the increase (or decrease) in incremental geothermal capacity from 2003 to 2004, 2004 to 2005, and 2005 to 2006. For 2006, the Energy Commission approved a total of 182.2 MW of geothermal capacity at the nine Calpine Geysers facilities. The Energy Commission denied 4 MW of the 186.2 MW for which Calpine applied for incremental geothermal certification because those 4 MW did not result from eligible capital improvements, per the Energy Commission's eligibility criteria.

For each of Calpine's nine facilities, part of the capacity is certified as incremental geothermal, and the remainder is considered geothermal restricted to baseline RPS energy. However, the CPUC's Accounting Rules Decision considers incremental procurement to be any RPS-eligible procurement above the previous year's APT, so it is no longer necessary to classify geothermal generation as either incremental or baseline based on generation from capital improvements to geothermal facilities constructed before 1996.⁶³

⁶³ CPUC Decision 06-10-050, October 19, 2006. Rulemaking 06-05-027.
http://docs.cpuc.ca.gov/PUBLISHED/FINAL_DECISION/61025.htm

Unit 20	17.0	21.0	27.0	31.0	4.0	6.0	4.0
Total Approved	81.6	113.0	145.4	182.2	31.4	32.4	36.8
Not approved	6.0	6.0	6.0	4.0	--	--	--
¹ For example, for Unit 5/6 the Energy Commission certified 1.4 MW as incremental geothermal for 2003 and 6.5 MW for 2004. The 6.5 MW includes the 1.4 MW certified for 2003.							
² These columns show the difference between the quantities certified from one year to the next and are calculated from the first set of columns. To continue the example for Unit 5/6, for 2004 an additional 5.1 MW of incremental geothermal capacity was added to the amount certified for 2003.							

Source: RPS staff analysis of the CEC-1304 form submitted by the Geysers Power Company.

Method

The quantity of incremental geothermal electricity produced was estimated by applying the percentage of incremental capacity to the total energy production of the facility. The percentage of incremental capacity is derived by dividing the incremental geothermal capacity by the estimated operating capacity of the facility. The rationale for using operating capacity rather than the nameplate capacity is that the Geysers steam field has declined over time such that the installed nameplate capacity does not reflect current actual operating capacity.

The operating capacity was estimated using data that the Geysers Power Company submitted to the Energy Commission in compliance with the *Power Plant Owner Report Forms* (Form CEC-1304). In Form CEC-1304, the Geysers Power Company reported the capacity available from each of its power plants during "system peak" dates and hours specified by the Energy

Commission. For this analysis, the capacity-per-facility per month reported in Form CEC-1304 was reviewed, and the highest value was used as a proxy for the operating capacity. Table 29 shows the data reported in 2006 with the high values that serve as a proxy for the operating capacity highlighted.

¹ The data shown were reported by the Geysers Power Company in Form CEC-1304, Power Plant Owner Report. This report is due to the Energy Commission quarterly following the California Code of Regulations, Title 20, Division 2, Chapter 3, Section 1304(a).

² The data shown in shaded cells indicate the highest operating capacity for that plant for the year. The shaded boxes mark the estimated operating capacity per unit.

³ The data provided by ESPs aggregates procurement for Units 5 and 6 and for Units 7 and 8.

⁴ Unit off line.

⁵ Scheduled outage.

Source: RPS staff analysis of the CEC-1304 form submitted by the Geysers Power Company.

The following example illustrates how staff estimated the amount of incremental geothermal procured. For Geysers Unit 20, the Energy Commission certified 17 MW of incremental geothermal for 2003, 21 MW for 2004, 27 MW for 2005, and 31 MW for 2006. The total generation from the 17 MW certified as incremental geothermal capacity in 2003 was considered incremental geothermal generation. Generation from the additional 4 MW of incremental geothermal capacity in 2004, generation from the additional 6 MW of incremental geothermal capacity in 2005, and generation from the additional 4 MW of incremental geothermal capacity in 2006, was considered incremental geothermal generation for those years.

For 2006, the percentage of incremental capacity for Unit 20 was 8.5 percent, derived by dividing the facility's highest operating capacity for the year, 47 MW, by the 4 MW of increased incremental geothermal capacity for that year. Unit 20's total generation for 2005 was 371,724 MWh; therefore, PG&E's procurement of incremental geothermal from Unit 20 for 2005 equals 8.5 percent of 371,724 MWh, or 31,636 MWh.

Because SCE did not begin its procurement of incremental geothermal capacity until May 2003, its certified incremental geothermal capacity for 2003 was for only eight months of incremental geothermal procurement. In subsequent years, SCE's incremental geothermal procurement for January through April was based on incremental capacity in the previous year. For May through December 2006, the calculation uses the increase in certified incremental geothermal capacity applicable to 2006.

Results

As shown in Table 30, PG&E procured generation from three facilities with incremental geothermal capacity in 2006 — Units 13, 18, and 20 of the Calpine Geysers. PG&E procured 372,695 MWh from Unit 13; 99,234 MWh from Unit 18; and 269,550 MWh from Unit 20. Of the combined total of 741,479 MWh procured by PG&E from these units, the Energy Commission estimates that 47,444 MWh qualify as incremental geothermal energy. This estimate assumes that all of the incremental geothermal energy generated from these facilities was sold to PG&E and not allocated to a separate customer; total generation from these facilities exceeds the amount PG&E procured, indicating that some of the electricity produced was sold to a separate entity.

Table 4 shows an estimate of SCE's qualifying incremental geothermal procurement from the Calpine Geysers for 2006. SCE procured generation from the following Geysers facilities: Unit 3/Sonoma, Unit 5/6, Unit 7/8, Unit 12, and Unit 17. SCE's purchases from these units represent a mix of energy that qualified as either incremental or non-incremental geothermal. For 2006, of the 1,752,381 MWh procured by SCE from the Calpine Geysers, 227,698 MWh is estimated to be incremental geothermal. Separate factors are used to estimate January through April and May through December incremental geothermal generation. However, for the months of May through December 2006, the increased incremental geothermal capacity over those months in 2005 is used in this calculation.

For 2006, the total amount generated by these facilities was greater than the total procured by SCE (2,847,838 MWh was generated with 227,698 MWh qualifying as incremental geothermal), and this estimate assumes that all the incremental geothermal was procured by SCE and that the energy not procured by SCE is non-incremental geothermal.

Through 2006, SDG&E did not procure incremental geothermal generation.

¹ This is the highest monthly "Available MW @ System Peak" that is reported by Calpine in its filing to the Energy Commission, *Power Plant Owner Report Forms* (Form CEC-1304).

² Amount of capacity that the Energy Commission certified as "incremental geothermal."

³ Eligible incremental geothermal capacity divided by the operating capacity.

⁴ Reported by the generator to the Energy Commission.

⁵ Estimated amount of incremental generation available for procurement in 2006. For January 2006 through April 2006, the sum of the incremental geothermal capacity that was certified for 2005 and 2006 was used to calculate eligible incremental geothermal generation. However, from May 2006 through December 2006, only the increased amount of geothermal capacity certified for 2006 as compared to 2005 was used to calculate the incremental geothermal generation. This table assumes that SCE procured all of the incremental geothermal generation produced by these facilities.

⁶ Reported by SCE to the Energy Commission on the RPS-Track form.

Source: RPS staff analysis of SCE's 2006 CEC-RPS-TRACK form.

SECTION 6: Random Audit of IOU Contracts 5 Percent and Under

As noted in the *2005 Verification Report*, for specific purchases in which procurement exceeded generation by 5 percent or less, staff randomly selected a sample of these purchases from the IOUs' CEC-RPS-Track filings for 2004 and 2005 and requested that the IOUs submit invoices for those purchases. An analysis was performed to verify that the procurement claimed in the CEC-RPS-Track filing corresponded with the invoices submitted and to evaluate the differences.

The *2005 Verification Report* also intended for the Energy Commission to notify the IOU and the CPUC if discrepancies are discovered and to report on those discrepancies in the 2006 *Verification Report*.⁶⁴ The compilation of the audit and RPS Track data can be found in Tables 32-33, where the difference between the data sets is shown as a percentage difference. In Tables 32-33, positive numbers represent overclaims by the utility for a particular generating facility. Likewise, negative numbers represent cases where RPS Track form claims did not exceed the gross generation reported on the facility invoices.

Results are discussed below.

⁶⁴ 2005 RPS Verification Report, pg. 7, CEC-300-2007-001-CMF, August 2007.

*For RPS identification numbers that end in the suffix E and show nothing in the column "Generation Source Used for Comparison" are utility-certified facilities with no independently reported generation. As stated on page 47 in the <i>RPS Eligibility Guidebook, Third Edition</i> , the retail seller is responsible for reporting the generation data for the facilities it certifies. This reporting requirement will be satisfied through the CEC-RPS-Track forms. Therefore, the asterisk indicates that the facility is utility-certified and that the procurement amount reported is accepted as reported on the RPS-Track form.

Results

The most noteworthy result of the random audit is SCE's 2005 overclaim of 2.53 percent from the Second Imperial Geothermal Co. This claim is from a facility in the service territory of Imperial Irrigation District (IID). SCE has a group of older geothermal and biomass projects in the IID's service area that transmit their power to SCE through IID's transmission system. Previously, SCE included the scheduled quantity of generation at the IID/SCE interchange point, consistent with invoice data. However, as the rules for WREGIS were developed, SCE noted that one of WREGIS' objectives was to use independent, verifiable, and reliable data. As stated in the WREGIS Operating Rules published June 4, 2007, data collected by WREGIS will include meter information from Qualified Reporting Entities.⁶⁵ For the group of projects in IID territory for which it had previously reported scheduled data, SCE reported meter read data rather than procurement claims. The meter read data that SCE provided to the Energy Commission matches the RPS procurement claim reported on the RPS Track form.

⁶⁵ WREGIS Operating rules available at: <http://www.wregis.org/Documents.php>.

SECTION 7: Limitations of the Interim Tracking System

This report verifies the retail sellers' RPS procurement claims, with the following caveats.

The Interim Tracking System limits the extent to which the Energy Commission can cross-reference California RPS-procurement with other specific purchases. For example, in previous years Energy Commission staff coordinated with staff from energy agencies in Washington, Oregon, and Nevada to cross-reference California RPS-procurement with retail claims made in these states.

With PacifiCorp submitting procurement claims for this report, this coordination became a more important part of the verification process than in previous *Verification Reports* and required staff to consider the implications of PacifiCorp's procurement claim allocations in Idaho and Wyoming as well. However, staff does not coordinate with staff from energy agencies in these states to check against retail claims but may consider doing so in future reports. In addition, staff's ability to protect against double-counting is limited to the reporting requirements for each state and the availability of these additional procurement claims.

Further, staff has limited information about specific purchases made in which RECs are sold separately from the associated electricity.⁶⁶ To date, "unbundled" RECs have not been eligible for RPS compliance in California.⁶⁷ In other non-regulatory markets, however, generators, marketers, or brokers may sell "unbundled" RECs as a separate commodity on the voluntary market to individuals, companies, utilities, or other organizations. The Energy Commission does not track these voluntary transactions but has started collaborating with voluntary market organizations such as Green-e Energy.⁶⁸ As a result of this collaboration, Energy Commission staff is able to cross-check some, but not all, RPS procurement claims with unbundled RECs sold in the voluntary market, as Green-e Energy does not certify the entire voluntary REC market.

The robustness of the Interim Tracking System is also limited by the quality of the generation data. In most cases, the generation data used for this report is self-reported and not independently verified with third-party meter reads. WREGIS will help address many of these data limitations because it will track renewable energy transactions throughout the WECC (not just California, Oregon, and Washington) and be supported in most cases by generation data

⁶⁶ RECs represent the "renewable" quality of electricity generated from a renewable facility. A REC is created when a specific amount of renewable energy is generated; one MWh of renewable energy represents one REC. The voluntary REC market is not regulated in California. RECs are also commonly referred to as "renewable attributes" and "green tags."

⁶⁷ Public Utilities Code Section 399.16, as enacted by SB 107, allows the use of unbundled RECs once a tracking system is developed and other conditions are met.

⁶⁸ Green-e Energy, a program of the Center for Resource Solutions is an independent consumer protection program for the sale of renewable energy in the voluntary retail market. www.green-e.org/

from meter reads rather than self-reported generation data. The Energy Commission anticipates that WREGIS will be used for RPS verification for part of 2008 and all of 2009 and years hence.

Procurement Verification

Since the *2005 Verification Report*, staff has developed a new Access® database that allows for more accurate and efficient verification of RPS procurement claims. For example, the database allowed staff to revisit earlier year RPS procurement claims and compare the claims with previously unavailable generation data. Generation data is periodically updated. Using the database, if staff found a discrepancy in which total annual procurement from a specific facility appeared to exceed total annual generation from that facility by more than 5 percent, staff requested supporting information from the retail seller(s) making the procurement claim(s).

Following this approach, Energy Commission staff requested supporting information from the retail sellers and received supplemental information in all of these cases. In some cases, staff adjusted the procurement claims downward to match the invoices and, in cases where the supporting data matched the procurement claim, the claims were accepted.

As described in Section 6: Random Audit of IOU Contracts 5 Percent and Under, for specific purchases in which procurement exceeded generation by 5 percent or less in 2004 or 2005, and for procurement for which no generation data was available for comparison, an additional analysis was performed. Energy Commission staff randomly selected 10 specific purchases from 2004 and 10 specific purchases from 2005 from both PG&E and SCE, along with two specific purchases made by SDG&E for both 2004 and 2005, and requested invoices for those purchases from each of the utilities.

Conversely, Energy Commission staff's comparison of generation and procurement found that in some cases the generation exceeded procurement claims by more than 5 percent. In such cases, staff did not conduct further research to identify the source of the discrepancy, but rather was satisfied that the available generation data supported the specific purchase claim; the facility produced as much or more energy than was claimed by the utility for that year.

Possible explanations for generation discrepancies may include excess generation being sold to another utility, trader, or other entity. Also, the amount procured may reflect line losses such that more energy is generated than is delivered to the load. Additionally, verifying procurement claims with generation data is especially difficult for wind facilities. For example, individual wind turbines within a group of turbines that collectively comprise a wind facility are sometimes sold to a new party. This leads to difficulties locating owners of facilities who could provide generation data and can result in variances in record keeping by the retail sellers and the facility owners. Some wind facilities report to the EIA differently than they report the procurement to the retail sellers. In some cases, multiple facilities report under one EIA identification number. Further, for all technologies, the comparison of generation and procurement requires an element of professional judgment. For example, the retail seller may report a project by one name, but sources of generation data may identify a project by a

different name. Energy Commission staff must be able to determine which facilities use multiple names by cross-referencing various identification numbers.

While the Energy Commission recognizes the limitations of the Interim Tracking System, it is important to recognize that this *Verification Report* reflects staff review of over 2,390 specific purchases reported by the retail sellers during 2001 and 2003-2006. The method and results have benefited from public input and are as accurate as possible at this time.

The data shown are snapshots for that year and do not include banking from excess procurement in previous years or earmarking of future renewable energy contracts that may be available for RPS compliance purposes in future years. Retail sellers provide this information in the RPS Compliance Reports filed by retail sellers with the CPUC.⁶⁹ Upon adoption of this *Verification Report*, reporting retail sellers must submit Verified Compliance Reports to the CPUC within 30 days.

As noted before, because the CPUC is responsible for establishing the formulas to calculate the RPS baselines, implementing APTs, determining compliance, and imposing penalties for non-compliance, staff is not evaluating retail sellers' progress in meeting APTs in this report.

⁶⁹ Compliance report filings can be found on the CPUC's website for each retail seller at: <http://www.cpuc.ca.gov/PUC/energy/Renewables/compliance.htm>

APPENDICES:

This report contains three appendices: Appendix A is IOU Procurement From Facilities Under Contract With the Department of Water Resources for California's RPS Program; Appendix B is Retail Seller Initial Baseline Procurement Amounts, and; Appendix C is the Individual Retail Sellers' Modified RPS Track Forms.

Appendix A describes the IOUs' procurement claims from facilities under contracts with the Department of Water Resources that the CPUC assigned to each IOU to administer. It includes a high-level discussion of the workshop comments related to this issue as well as the Energy Commission's analysis and subsequent decisions regarding whether the procurement claims from these facilities are RPS-eligible.

Appendix B demonstrates the calculations used to determine the baseline amounts for the retail sellers covered in this *Verification Report*.

Appendix C includes modified versions of the CEC-RPS-Track Filings for PG&E, SCE, SDG&E, PacifiCorp, and certain ESPs. For example, a column was added to the tables to show procurement from generating facilities by other retail sellers, such as ESPs and POUs that reported to the SB 1305 Power Source Disclosure Program. The sum of the information reported to the Power Source Disclosure Program and the procurement information reported to the Energy Commission in the CEC-RPS-Track forms was compared to generation totals reported to the Energy Commission and/or the EIA. Another example is that a column was added to indicate the source of generation data used for this comparison.

The modified CEC-RPS Track filings compare each retail sellers' procurement claim for each facility with the generation totals as available. For utility-certified facilities, an asterisk is listed with the RPS identification numbers indicating that it is a utility-certified facility. As provided in the *RPS Eligibility Guidebook, Third Edition*, RPS Track form claims are accepted as the reported generation for utility-certified facilities.

APPENDIX A: IOU Procurement From Facilities Under Contract With the Department of Water Resources for California's RPS Program

In 2000-2001, Californians were faced with a shortage of electric power and rising wholesale electricity costs, which culminated in sharply increasing retail energy rates. The IOUs experienced increasing debt because their power costs exceeded what they could recoup from ratepayers, and electricity suppliers hesitated to sell to the IOUs because of credit concerns. In response to the energy crisis, Assembly Bill 1X1 authorized the California DWR to procure electricity on behalf of the retail customers of the three large IOUs.⁷⁰ DWR subsequently entered into a number of power purchase contracts for this purpose. On September 19, 2002, the CPUC specified the allocation of the operational control of DWR's long-term contracts among the IOUs.⁷¹ In the September decision, the CPUC explained that the allocation of DWR contracts was a necessary step towards achieving the CPUC's and the Legislature's goal of returning the procurement function to the IOUs by January 1, 2003.

Under Assembly Bill 57⁷², the CPUC approved an interim order that required each IOU to resume procurement for their customers by no later than January 1, 2003, and after the CPUC approved each IOU's plan, the DWR was no longer responsible for procuring power for California ratepayers. In December 2002, the CPUC set terms and conditions and assigned responsibility for performing contract administrative services for the DWR contracts to SCE, SDG&E, and PG&E as of January 1, 2003.⁷³

DWR Contracts Assigned to SDG&E

The CPUC assigned two long-term DWR wind contracts to SDG&E to manage. These contracts specifically allocated ownership of the renewable attributes to the facility owners.⁷⁴ Consequently, SDG&E did not claim procurement from these contracts toward its RPS obligations. RECs from these contracts for generation from the Whitewater Hill and Cabazon Wind facilities have been purchased and claimed in the voluntary market.⁷⁵

⁷⁰ Assembly Bill 1X1, Statutes of 2001, First Extra Ordinary Session, Chapter 4.

⁷¹ CPUC Decision D.02-09-053, September 19, 2002. See Table 1 for the Adopted DWR Contract Allocation.

⁷² Assembly Bill 57, Wright, Chapter 835, Statutes of 2002.

⁷³ CPUC, Decision 02-12-069, December 19, 2002.

⁷⁴ <http://www.cers.water.ca.gov/shellwind.cfm> The Cabazon and Whitewater Hill wind contracts both specify that renewable attributes belong with the facility owners. See contract language at the following sites under special conditions:

http://www.cers.water.ca.gov/pdf_files/power_contracts/shellwind/071201_cabazon_ppa.pdf

http://www.cers.water.ca.gov/pdf_files/power_contracts/shellwind/011003whtwtrHillAmendedPPA.pdf

⁷⁵ As an example, the company Terrapass purchased Cabazon/Whitewater Hill Wind RECs on the voluntary market:

<http://74.125.113.132/search?q=cache:9tMbHvYQKOUJ:www.terrapass.com/ford/portfolio.html+whitewater+wind+RECs+terrapass&cd=1&hl=en&ct=clnk&gl=us>

DWR Contracts Assigned to PG&E

The CPUC allocated three long-term DWR contracts to PG&E. PG&E recently reported to the Energy Commission that two of those projects never came on-line. The third project, a contract with Soledad Energy, LLC, for energy from a biomass facility, did not specify ownership of the RECs.⁷⁶

PG&E did not initially claim procurement from this biomass facility for RPS compliance. However, after this issue was raised during the RPS procurement verification process for this report, PG&E further investigated the terms and conditions of the DWR contract with Soledad Energy and subsequently requested that the Energy Commission count the procurement from the biomass facility toward its RPS procurement targets consistent with public utilities code section 399.166(a)(5) which states:

“No renewable energy credits shall be created for electricity generated pursuant to any electricity purchase contract with a retail seller or a local publicly owned electric utility executed before January 1, 2005, unless the contract contains explicit terms and conditions specifying the ownership or disposition of those credits. Deliveries under those contracts shall be tracked through the accounting system described in subdivision (b) of Section 399.13 and included in the baseline quantity of eligible renewable energy resources of the purchasing retail seller pursuant to Section 399.15.”⁷⁷

For contracts executed before 2005, this statute provides that a retail seller shall own the RECs for RPS compliance, unless the contract specifies otherwise. The contract with Soledad Energy did not include provisions that retained, for the facility owner, the renewable attributes associated with the facility’s generation. Therefore, these attributes were passed to the purchaser (DWR/PG&E) along with the procured energy as a bundled product.

DWR Contracts Assigned to SCE

The CPUC assigned a long-term DWR contract for energy generation from the Mountain View I and II wind facilities (Mountain View) to SCE. The contract between DWR and the owners of the Mountain View facilities, currently AES Windpower, Inc.,⁷⁸ was limited to the sale of the facilities’ energy generation only and contained specific terms and conditions that explicitly

⁷⁶ A copy of the original contract with Soledad Energy is available at:

http://www.cers.water.ca.gov/pdf/power_contracts/soledad/042801_soledad_ppa.pdf

⁷⁷ Section 399.16(1)(5) may be viewed at: <http://www.leginfo.ca.gov/cgi-bin/waisgate?WAISdocID=11415019825+0+0+0&WAIAction=retrieve>

⁷⁸ The DWR contract with Mountain View specifically assigned ownership of the RECs associated with facilities’ generation to the owners of the facilities (PG&E Energy Trading - Power, L.P.) at the time of the contract.

excluded the purchase of the renewable attributes associated with the wind generation.⁷⁹ Consequently, SCE did not acquire the renewable attributes or RECs associated with the wind energy from the Mountain View facilities.⁸⁰

SCE has claimed procurement from the Mountain View facilities toward its RPS targets for 2003 through 2007.⁸¹ In previous *Verification Reports*, the Energy Commission inadvertently counted SCE's claims for Mountain View generation as eligible toward its RPS obligations for 2004 and 2005. SCE has stated that it has continued to plan for such procurement based on the assumption that these claims were, in fact, RPS-eligible.

Public Utilities Code section 399.16(a) (5) is relevant in considering SCE's claims from Mountain View. As mentioned above, the DWR contract with Mountain View explicitly assigns ownership of the renewable attributes associated with the facilities' generation to the facilities' owner. As a result, the DWR contract is an energy-only or null-power contract, and SCE's procurement does not include the renewable attributes, which must be procured with the energy as a bundled product to meet the requirements for RPS compliance. The Energy Commission solicited public input on this issue at a staff workshop in early 2009.

⁷⁹ http://www.cers.water.ca.gov/mountain_view.cfm The Mountain View wind contract specifies that all the rights and interests in the renewable attributes, emission reductions or credits (offsets) belong to the facility owners. See contract language at the following site:

http://www.cers.water.ca.gov/pdf_files/power_contracts/mountain_view/092002_pge_et_amended_ppa.pdf

⁸⁰ RECs represent the renewable and environmental attributes associated with energy production (Public Utilities Code Section 399.12[f]). The CPUC requires each RPS contract to convey all green attributes, including the RECs, to the buyer (See D.08-04-009, as modified by D.08-08-028). Only the owner of a REC is allowed to make renewable claims, including compliance claims, about a MWh of renewable energy generation.

⁸¹ This *RPS Verification Report* covers only 2001-2006. As noted in Section 1: Introduction Renewable Portfolio Standard Procurement Targets Large IOUs, p.6, 2001 is used to calculate the baseline. In 2003 and subsequent years, excess RPS eligible procurement may be applied toward RPS targets under flexible compliance rules.

RPS Procurement Verification Data Review Workshop — Overview of Public Comments

On March 26, 2009, Energy Commission staff held an RPS Procurement Verification Data Review workshop to publicly present the initial results of the verification process for this report. Among other agenda items, the workshop addressed the issue of whether energy procurement from facilities under DWR contracts should be eligible for RPS compliance. In advance of the workshop, two documents were made publicly available with the workshop notice to provide background information and questions to guide the workshop discussion.⁸² Many entities provided public comments following the workshop.⁸³ Workshop comments that address procurement claim issues for the IOUs are discussed below, followed by an explanation of the Energy Commission's decision regarding whether the procurement from these contracts counts toward RPS compliance.

Because the Energy Commission has no authority over the voluntary REC market, staff has limited information about specific voluntary purchases made in which RECs are sold separately from the associated commodity electricity.⁸⁴ To date, unbundled RECs (RECs purchased separately from the energy) have not been eligible for RPS compliance in California.⁸⁵ In non-regulatory markets, however, generators, marketers, or brokers may sell unbundled RECs as a separate commodity on the voluntary market to individuals, companies, utilities, or other organizations. The Energy Commission does not track these voluntary transactions but has started working with voluntary market organizations such as Green-e Energy.⁸⁶ As a result of this collaboration, Energy Commission staff is able to cross-check some, but not all, RPS procurement claims with unbundled RECs sold on the voluntary market; Green-e Energy does not certify and verify the entire voluntary REC market.

⁸² Workshop Notice Attachment A: Background Information Regarding Outstanding Renewables Portfolio Standard Procurement Claims http://www.energy.ca.gov/renewables/02-REN-1038/documents/2009-03-26_workshop/2009-03-26_WORKSHOP_ATTACHMENT_A.PDF and Attachment B: Questions Regarding Outstanding Renewables Portfolio Standard Procurement Claims http://www.energy.ca.gov/renewables/02-REN-1038/documents/2009-03-26_workshop/2009-03-26_WORKSHOP_ATTACHMENT_B.PDF

⁸³ To see the workshop comments go to: http://www.energy.ca.gov/renewables/02-REN-1038/documents/2009-03-26_workshop/comments/

⁸⁴ Note that the voluntary REC market is not regulated by the State of California.

⁸⁵ Public Utilities Code Section 399.16, as enacted by SB 107, allows the CPUC to authorize the use of RECs for RPS compliance once the REC tracking system is operational and other conditions are met. In D.06-10-019, the CPUC decided that unbundled RECs would not be allowed for RPS compliance, but that the CPUC would address the use of tradable RECs at a later date. While the CPUC has issued a proposed decision that would authorize the use of tradable RECs, it has not yet voted on this decision.

⁸⁶ Green-e Energy, a program of the Center for Resource Solutions, is an independent consumer protection program for the sale of renewable energy in the voluntary retail market. www.green-e.org/

Green-e Energy uses attestation-based “chain of custody” tracking whereby each party that owns a REC, from the generator to the final seller, signs a specific attestation declaring that they are only selling each REC once to the purchaser named on the attestation.⁸⁷ This tracking system has verified that wholesalers procured RECs from the owners of the Mountain View facilities and resold the RECs in the voluntary market (See Table A-1). The wholesale marketers sold the Mountain View RECs to Energy Service Providers, POUs, and entities such as Safeway⁸⁸ and Sustainable Websites⁸⁹ and others who have made and continue to make retail claims about their procurement of Mountain View RECs. In some cases, Mountain View RECs have changed ownership multiple times through multiple contract arrangements, as tracked by Green-e Energy. In workshop comments, AES Windpower stated that as the current owner of the Mountain View facilities, it is conceivable that not all of the REC documentation is in its possession.⁹⁰

Mountain View RECs have been transferred to entities nationwide. A renewable energy marketing company in South Carolina contacted staff after the public comment period was over and expressed concern that the Mountain View RECs it purchased could be invalidated if they were counted toward SCE’s RPS procurement obligations. Additionally, several organizations that have purchased Mountain View RECs have received national awards from entities such as the U.S. Environmental Protection Agency, U.S. Department of Energy, and the National Renewable Energy Laboratory, and recognition from non-governmental businesses for their efforts to increase demand for renewable energy by purchasing Mountain View RECs.

Table A-1 shows the amount of Mountain View RECs claimed on the voluntary market from 2004 through 2006, as reported to Energy Commission staff as a result of the workshop. The table also shows the amount of Mountain View procurement that SCE claimed for RPS purposes and the amount of annual generation produced by Mountain View. The negative figures in the final column represent the percent of over-allocation (the percentage of combined RPS procurement and voluntary REC claims that exceeded generation).

Table A-1
Comparison of Mountain View REC and RPS Procurement Claims

Year	Amount of Known Wholesale Mountain View Voluntary REC Claims ^{1,2}	SCE Mountain View RPS Procurement Claims ³	Annual Generation for Mountain View I & II (MWh) ⁴	Voluntary REC and RPS Claims Compared as Percentage of Mountain View Generation ⁵
2004	79,116	193,425	189,177	-44%
2005	195,289	219,590	217,653	-91%
2006	220,080	221,594	225,700	-96%
¹ One REC equals one MWh. REC claims represented in this table are from Mountain View Wind Facility units I & II combined for the years shown.				
² Reported to Energy Commission by Green-e Energy, based on annual reporting by participants in Green-e Energy. RECs generated in a particular year may have been sold during that year, the preceding year or the following year, as contractually arranged. These claims include what was reported to the Energy Commission for its Power Source Disclosure Program by ESPs and POUs claiming Mountain View RECs for their power content labels.				
³ Reported by SCE in its CEC-RPS-Track filings. Because one REC is generated per one MWh and REC marketers report in MWh, staff has converted this number to MWh.				
⁴ The generation data used here was reported by the facility to the Energy Information Administration and/or the Energy Commission Public Interest Energy Research program. Energy Commission staff followed up with the owners of Mountain View facilities on the generation claims and in September 2008 received slightly different generation numbers than was identified by other reporting programs. The original amount was reported by the owners of the facilities was in kWh. Because one REC is generated per one MWh and REC-marketers report in MWh, staff has converted this number to MWh.				
⁵ The negative represents the percentage of over claimed Mountain View procurement derived by adding together the voluntary market claims and SCE's RPS procurement claims and comparing them with the amount of available generation. The negative indicates that there were more Mountain View claims than there was generation available.				

ESPs and POUs also made competing claims for Mountain View RECs,⁹¹ and reported Mountain View generation as specific purchases in their Annual Reports submitted to the Energy Commission's Power Source Disclosure Program.⁹² These entities made voluntary REC claims, not claims for RPS compliance, and incorporated the amount of their Mountain View REC purchases in their Power Content Labels, which were distributed to their retail customers. These claims reported to the Energy Commission are included in the amount represented in the column in Table A-1 titled "Amount of Known Wholesale Mountain View Claims" because it was the wholesale marketers that sold the RECs to the ESPs and POUs. Also represented in this column are numerous other entities that have made claims to Mountain View RECs on the voluntary market.⁹³ This column includes only the wholesale voluntary REC claims of which the Energy Commission has been informed.

After the workshop, SCE provided a range of policy options for the Energy Commission to consider in regards to its Mountain View procurement claims. SCE's strong preference is that the Energy Commission count all of SCE's Mountain View procurement claims as RPS

⁹¹ The amount claimed by these entities is incorporated in Table A-1 as it was the wholesale marketers that sold the Mountain View RECs to the ESPs and POUs.

⁹² The Power Source Disclosure Program is implemented pursuant to Public Utilities Code Section 398.1(b), as enacted by Senate Bill 1305 (Chapter 796, Statutes of 1997).

⁹³ To view examples of public claims to Mountain View RECs see:

http://shop.safeway.com/corporate/safeway/windenergy/windenergy_mountainview.htm and <http://www.sustainablewebsites.com/>

compliant. If this is not possible, SCE proposes other options for the Energy Commission to consider, including the following:

- The Energy Commission counts SCE's Mountain View procurement claims that were previously verified (2004 and 2005) as RPS-compliant, less the amounts claimed by others in the Power Source Disclosure Program and Voluntary Markets in 2006.
- For any options where procurement claims are discredited, the Energy Commission allows SCE to purchase RECs on the voluntary market to match with the energy it procured from the Mountain View facilities.

In its comments SCE argues that these options are appropriate in part because SCE has relied on the Mountain View procurement to plan for its future procurement needs. SCE dismisses the issue of double-counting and argues that it is the only party that may claim Mountain View procurement for the purposes of the RPS, because it is the only entity that acquired energy from the Mountain View facilities; the other entities having acquired only the RECs.

As indicated in the workshop transcript and most of the public comments, representatives of the voluntary market are concerned with the possible double-counting of Mountain View RECs if SCE is allowed to count energy procurement from Mountain View for RPS compliance. Because many of these entities are contractually obligated or have attested to the fact that Mountain View RECs are not being claimed for any other purposes, a decision to count SCE's Mountain View claims for RPS compliance would sanction double-counting and cause an upset to the voluntary REC market and its many participants.⁹⁴

Further, allowing a retail seller to count unbundled energy-only procurement toward its RPS target would be contrary to the RPS statutes, as implemented by the *RPS Eligibility Guidebook*. Such action would cause a great deal of regulatory uncertainty about how the RPS statutes are and will be implemented.

SCE's proposal to purchase RECs on the voluntary market to replace the discredited procurement is also not allowed. The CPUC has not authorized the use of REC-only transactions.

⁹⁴ See workshop comments: http://www.energy.ca.gov/renewables/02-REN-1038/documents/2009-03-26_workshop/comments/3Degrees_Comments_Regarding_RPS_Mountain_View_I%20and_II_Facilities.pdf

Energy Commission Determinations on RPS Procurement Claims From the DWR Contracts

Following the March workshop, PG&E requested that the Energy Commission count its procurement under the Soledad contract toward its RPS procurement targets. Because the DWR contract with Soledad Energy did not include provisions that assigned the facility owner the renewable attributes associated with the facilities' generation, these attributes passed to the purchaser (DWR/PG&E) along with the procured energy as a bundled product consistent with Public Utilities Code Section 399.16(a)(5). Consequently, the Energy Commission accepts the RPS procurement claims made by PG&E for the Soledad Energy Facility.

After careful consideration of the various options to remedy the situation for SCE's procurement claims from the DWR contract with Mountain View, the Energy Commission has determined that SCE may not count its procurement from the Mountain View facilities for purposes of California's RPS, for the following reasons: 1) SCE procured unbundled energy and unbundled energy procurement is not eligible for California's RPS, and 2) accepting SCE's procurement claim would effectively sanction a double counting of RECs, in conflict with the Energy Commission's responsibility to protect against such double counting.⁹⁵ Additionally, SCE may not retroactively match unbundled RECs with energy procured under the DWR contract with Mountain View toward its RPS obligations for any years in which unbundled RECs are not authorized to be used toward RPS compliance.

Energy-only transactions are not eligible for RPS compliance because they do not represent the benefits of renewable generation, and counting such transactions for RPS compliance would essentially allow for double counting. Further, unbundled, or REC-only, transactions have not been nor are they currently eligible for California's RPS. Early editions of the *RPS Eligibility Guidebook* refer to RECs in a section titled "Outstanding Issues" and reference the CPUC 2003 decision 03-06-071 (June 19, 2003), stating that generation must be bundled with associated RECs to qualify for the RPS.⁹⁶ The earlier editions of the *RPS Eligibility Guidebook* further note that any action by the Energy Commission and the CPUC to allow RECs for RPS compliance that are traded separately from energy would require further deliberations and public input.⁹⁷

The current version of the *RPS Eligibility Guidebook*⁹⁸ states the following:

"RECs and energy procured together as a 'bundled' commodity are eligible for the California RPS. RECs sold separately from the underlying energy are termed 'tradable' and are not eligible toward California RPS procurement requirements."

⁹⁵ Public Utilities Code Section 399.13(b) and(c).

⁹⁶ CPUC, Decision 03-06-071, June 19, 2003.

⁹⁸ *Renewables Portfolio Standard Eligibility Guidebook, Third Edition*, January 2008.

<http://www.energy.ca.gov/2007publications/CEC-300-2007-006/CEC-300-2007-006-ED3-CMF.PDF>

Allowing SCE to count Mountain View procurement would not only violate current RPS statutes and requirements under the Energy Commission and CPUC's RPS implementation authorities, but it would also create contractual violations for Mountain View RECs sold on the voluntary market. Such a decision would also raise the related issues for PG&E and SDG&E, who did not claim unbundled procurement from their DWR contracts for RPS purposes.

The Energy Commission strives for accuracy in its RPS procurement verification process and now has a more robust verification process in place to assist in these efforts. As a result, the verification results in this report should be more accurate than what was reported in previous *Verification Reports*. The Energy Commission must retain discretion to revise the results and findings of prior verification reports in order to correct data that is inaccurate, false, or misleading. For example, as was done in this report, if a facility's certification is revoked because it was never eligible for the RPS (despite an application claiming the contrary), all of the historical procurement claims associated with that facility will be removed and not counted as eligible toward a retail seller's RPS obligations. The Energy Commission discretion in this regard allows retail sellers to resubmit RPS Track forms to make corrections to earlier claims.

APPENDIX B: RPS Initial Baseline Procurement Amount

**Table B-1:
IOU RPS Baseline Procurement Amount**

IOUs	A 2001 Total Retail Sales	B 2001 RPS-Eligible Procurement	C 2003 Total Retail Sales	D 2003 Baseline Procurement Amount*
PG&E	75,320,000,000	6,639,625,743	71,099,363,000	7,020,767,192
SCE	74,808,598,688	11,126,379,709	70,616,552,902	11,250,977,300
SDG&E	14,998,806,069	145,647,081	15,043,864,828	296,072,688
*Calculation for 2003 Baseline Procurement Amount is $D = (B/A \times C) + (0.01 \times A)$				

Source: RPS staff analysis of 2001 and 2003 CEC-RPS-TRACK forms submitted by PG&E, SCE, and SDG&E.

For the IOUs, annual California retail sales amounts were obtained from each retail seller's RPS-Track form for that year.

**Table B-2:
ESP RPS Baseline Procurement Amount**

ESPs	A 2001 Total CA Retail Sales	B 2001 RPS-Eligible Procurement	C 2005 Total CA Retail Sales	D 2005 Baseline Procurement Amount*
APS Energy Services	327,987 ²	0	2,689,420 ²	0
Calpine Power America	542,317 ²	0	1,046,232 ¹	0
Constellation New Energy	108,396 ¹	0	1,058,030 ¹	0
Pilot Power Group, Inc.	393,156 ¹	0	5,920,750 ³	0
Sempra	1,314,520 ¹	0	5,235,220 ¹	0
Strategic Energy LLC	2,200 ³	2,200 ³	113,510 ³	113,510
3 Phases Renewables	327,987 ²	0	2,689,420 ²	0

* Calculation for 2005 Baseline Procurement Amount is $D = (B/A \times C)$

¹ The Energy Commission only has retail sellers' total annual retail sales data for years in which they made an RPS claim with a submitted RPS-Track form. For retail sellers with retail sales in years before making an RPS claim staff used the total CA retail sales amounts that they reported to the CPUC in their March 2009 RPS Compliance Reports.

² Retail sellers were contacted and provided annual CA retail sales amounts when these amounts were not available in the RPS Track forms, or in the CPUC March 2009 RPS Compliance Reports.

³ Annual CA retail sales amounts were obtained from each retail seller's RPS-Track form for that year.

Source: RPS staff analysis of 2001 and 2003 CEC-RPS-TRACK forms submitted by the ESPs listed in the table.

**Table B-3:
MJU RPS Baseline Procurement Amount**

MJU	A 2001 Total System Retail Sales	B 2001 Total CA Retail Sales	C 2001 System RPS-Eligible Procurement	D 2003 Total CA Retail Sales	E 2003 Baseline Procurement Amount*
PacifiCorp	47,708,462 ¹	787,150 ³	1,630,729 ¹	834,702 ³	36,403

* Calculation for 2003 Baseline Procurement Amount E = (B/A*C/B*D) + (0.01*A)

¹The Energy Commission only has retail sellers' total annual retail sales data for years in which they made an RPS claim with a submitted RPS-Track form. For Retail Sellers with retail sales in years before making an RPS claim staff used the total CA retail sales amounts that they reported to the CPUC in their March 2009 RPS Compliance Reports. Because the numbers reported to the CPUC did not use verified data, this number is subject to change.

² Retail sellers were contacted and provided annual CA retail sales amounts when these amounts were not available in the RPS Track forms, or in the CPUC March 2009 RPS Compliance Reports.

³ Annual CA retail sales amounts were obtained from each retail seller's RPS-Track form for that year.

Note that Energy Commission staff is working with PacifiCorp on obtaining the correct amounts in accordance with the formula. Readers should expect to see a revised baseline amount for PacifiCorp as this issue is resolved.

Source: RPS staff analysis of 2001 and 2003 CEC-RPS-TRACK forms submitted by PacifiCorp. For calculation values not reported on the CEC-RPS-TRACK forms, staff used amounts reported to the CPUC on their March 2009 RPS Compliance Reports.

APPENDIX C: Individual Retail Sellers' Modified RPS Track Forms

For ease of viewing, staff has provided the template below with footnotes explaining the headers for each column title in the tables that follow. This template was used for every retail seller, with the exception of PacifiCorp where staff compared RPS procurement claims with public disclosure statements made in other states. For PacifiCorp, the column titled: *Procurement Reported to Power Source Disclosure Program (kWh)* is titled "*RECs Allocated to Other States.*" As necessary, there are some individualized footnotes found on specific tables.

Name of Retail Seller Year RPS Procurement Claim									
CEC RPS ID Number ¹	Facility Name ²	Fuel Type ³	Annual Generation Procured (kWh) ⁴	RPS Procurement Claims by other Retail Sellers (kWh) ⁵	Procurement Reported to Power Source Disclosure Program (kWh) ⁶	Generation Data Used for Comparison with Procurement (kWh) ⁷	Difference Between Generation and Procurement ⁸	Generation Data Source ⁹	Date RPS Certified ¹⁰
¹ The California Energy Commission assigns this RPS Certification identification number to the generating facility, when it certifies the facility as RPS-eligible. [*] RPS identification numbers that end in the suffix E and show No Data in the column "Generation Data Used for Comparison with Procurement" are utility-certified facilities with no independently reported generation. As stated on page 47 in the <i>RPS Eligibility Guidebook, Third Edition</i> , the retail seller is responsible for reporting the generation data for the facilities it certifies. This reporting requirement will be satisfied through the CEC-RPS-Track forms. Therefore, the asterisk indicates that the facility is utility-certified and that the procurement amount reported is accepted as reported on the RPS-Track form and no additional generation data is available for comparison.									
² This is the facility name as listed on the California's Renewables Portfolio Standard (RPS) Eligible Facilities database, which can be found at: http://www.energy.ca.gov/portfolio/documents/LIST_RPS_CERT.PDF . In some cases the facility name may be different than what was reported on the RPS-Track form. Energy Commission staff has attempted to match the name of the facility to match the name in the Energy Commission RPS Certification Database.									
³ This is the fuel type as listed on the California's Renewables Portfolio Standard (RPS) Eligible Facilities database, which can be found at: http://www.energy.ca.gov/portfolio/documents/LIST_RPS_CERT.PDF . In some cases, the fuel type may be different than what was reported on the RPS-Track form. Energy Commission staff has attempted to match the fuel type to match with what is listed in the Energy Commission RPS Certification Database.									
⁴ The procurement amount shown in this column is the amount reported by the retail seller to the Energy Commission in the CEC-RPS-Track form.									
⁵ The figures reported in this column are the total specific purchases reported on CEC-RPS-Track forms from other retail sellers.									
⁶ This column lists procurement claims from specific purchases from other retail sellers for the same facilities, if applicable. These claims were reported to the Energy Commission's Power Source Disclosure Program, which collects Annual Reports from retail sellers of electricity. Energy Commission staff compare the sources of power retailers have claimed to the actual sources used for electricity that is consumed in California. Please note that for PacifiCorp, the header includes "Procurement Reported to Other States for Power Source Disclosure Programs."									
⁷ The generation totals in this column are taken from various sources that collect facility-level generation information. These agencies are listed in the footnote under "Generation Data Sources." If multiple sources had generation data for the same facility, the highest generation total was used for comparison with the procurement claim(s).									
⁸ The percentages that appear in this column represent the differences between the data source with the highest generation amount and the annual procurement claim.									
⁹ Energy Commission staff the Energy Commission compares RPS procurement claims with generation data obtained from the various sources listed below: United States Electricity Information Association (EIA); Energy Commission's Electricity Analysis Office (EAO); Energy Commission's Public Interest Energy Research (PIER) Renewable Wind Program; Invoice or Supporting Documentation (Inv/SD) Energy Commission's Existing Renewable Funding Program (ERFP);									
¹⁰ This is the date that the facility's RPS certification became effective.

* RPS identification numbers that end in the suffix E and show "No Data" in the column "Generation Data Used for Comparison with Procurement" are utility-certified facilities with no independently reported generation. As stated on page 47 in the RPS Eligibility Guidebook, Third Edition, the retail seller is responsible for reporting the generation data for the facilities it certifies. This reporting requirement will be satisfied through the CEC-RPS-Track forms. Therefore, the asterisk indicates that the facility is utility-certified and that the procurement amount reported is accepted as reported on the RPS-Track form.

¹RPS certification is currently pending for **Blundell 1 facility**.

* RPS identification numbers that end in the suffix E and show No Data in the column "Generation Data Used for Comparison with Procurement" are utility-certified facilities with no independently reported generation. As stated on page 47 in the RPS Eligibility Guidebook, Third Edition, the retail seller is responsible for reporting the generation data for the facilities it certifies. This reporting requirement will be satisfied through the CEC-RPS-Track forms. Therefore, the asterisk indicates that the facility is utility-certified and that the procurement amount reported is accepted as reported on the RPS-Track form.

¹RPS certification is currently pending for **Blundell 1 facility**.

²Procurement from **Combine Hills** facility is ineligible to count towards the California RPS because the procurement from this facility was for non-bundled energy.

* RPS identification numbers that end in the suffix E and show No Data in the column "Generation Data Used for Comparison with Procurement" are utility-certified facilities with no independently reported generation. As stated on page 47 in the RPS Eligibility Guidebook, Third Edition, the retail seller is responsible for reporting the generation data for the facilities it certifies. This reporting requirement will be satisfied through the CEC-RPS-Track forms. Therefore, the asterisk indicates that the facility is utility-certified and that the procurement amount reported is accepted as reported on the RPS-Track form.

¹RPS certification is currently pending for **Blundell 1 facility**.

²Procurement from **Combine Hills** facility is ineligible to count towards the California RPS because the procurement from this facility was for non-bundled energy.

Pacific Gas and Electric RPS Procurement Claims Analysis

Pacific Gas and Electric 2001 RPS Procurement Claims

CEC RPS ID Number	Facility Name	Fuel Type	Annual Generation Procured (kWh)	RPS Procurement Claims by Other Retail Sellers (kWh)	Procurement Reported to Power Source Disclosure Program (kWh)	Generation Data Used for Comparison With Procurement (kWh)	Difference Between Generation and Procurement	Generation Data Source	Date RPS Certified

¹ Procurement claim from Nove Investments facility is ineligible because facility is not RPS certified.									
² Procurement claim from Georgia Pacific Corp. facility is ineligible because facility is not RPS certified.									
* RPS identification numbers that end in the suffix E and show nothing in the column "Generation Data Used for Comparison with Procurement" are utility-certified facilities with no independently reported generation. As stated on page 47 in the <i>RPS Eligibility Guidebook, Third Edition</i> , the retail seller is responsible for reporting the generation data for the facilities it certifies. This reporting requirement will be satisfied through the CEC-RPS-Track forms. Therefore, the asterisk indicates that the facility is utility-certified and that the procurement amount reported is accepted as reported on the RPS-Track form.									

**Pacific Gas and Electric
2003 RPS Procurement Claims**

CEC RPS ID Number	Facility Name	Fuel Type	Annual Generation Procured (kWh)	RPS Procurement Claims by Other Retail Sellers (kWh)	Procurement Reported to Power Source Disclosure Program (kWh)	Generation Data Used for Comparison With Procurement (kWh)	Difference Between Generation and Procurement	Generation Data Source	Date RPS Certified

* RPS identification numbers that end in the suffix E and show "No Data" in the column "Generation Data Used for Comparison with Procurement" are utility-certified facilities with no independently reported generation. As stated on page 47 in the *RPS Eligibility Guidebook, Third Edition*, the retail seller is responsible for reporting the generation data for the facilities it certifies. This reporting requirement will be satisfied through the CEC-RPS-Track forms. Therefore, the asterisk indicates that the facility is utility-certified and that the procurement amount reported is accepted as reported on the RPS-Track form.

**Pacific Gas and Electric
2004 RPS Procurement Claims**

CEC RPS ID Number	Facility Name	Fuel Type	Annual Generation Procured (kWh)	RPS Procurement Claims by Other Retail Sellers (kWh)	Procurement Reported to Power Source Disclosure Program (kWh)	Generation Data Used for Comparison With Procurement (kWh)	Difference Between Generation and Procurement	Generation Data Source	Date RPS Certified

* RPS identification numbers that end in the suffix E and show nothing in the column "Generation Data Used for Comparison with Procurement" are utility-certified facilities with no independently reported generation. As stated on page 47 in the *RPS Eligibility Guidebook, Third Edition*, the retail seller is responsible for reporting the generation data for the facilities it certifies. This reporting requirement will be satisfied through the CEC-RPS-Track forms. Therefore, the asterisk indicates that the facility is utility-certified and that the procurement amount reported is accepted as reported on the RPS-Track form.

**Pacific Gas and Electric
2005 RPS Procurement Claims**

CEC RPS ID Number	Facility Name	Fuel Type	Annual Generation Procured (kWh)	RPS Procurement Claims by Other Retail Sellers (kWh)	Procurement Reported to Power Source Disclosure Program (kWh)	Generation Data Used for Comparison With Procurement (kWh)	Difference Between Generation and Procurement	Generation Data Source	Date RPS Certified

* RPS identification numbers that end in the suffix E and show nothing in the column "Generation Data Used for Comparison with Procurement" are utility-certified facilities with no independently reported generation. As stated on page 47 in the *RPS Eligibility Guidebook, Third Edition*, the retail seller is responsible for reporting the generation data for the facilities it certifies. This reporting requirement will be satisfied through the CEC-RPS-Track forms. Therefore, the asterisk indicates that the facility is utility-certified and that the procurement amount reported is accepted as reported on the RPS-Track form.

**Pacific Gas and Electric
2006 RPS Procurement Claims**

CEC RPS ID Number	Facility Name	Fuel Type	Annual Generation Procured (kWh)	RPS Procurement Claims by Other Retail Sellers (kWh)	Procurement Reported to Power Source Disclosure Program (kWh)	Generation Data Used for Comparison With Procurement (kWh)	Difference Between Generation and Procurement	Generation Data Source	Date RPS Certified

* RPS identification numbers that end in the suffix E and show nothing in the column "Generation Data Used for Comparison with Procurement" are utility-certified facilities with no independently reported generation. As stated on page 47 in the *RPS Eligibility Guidebook, Third Edition*, the retail seller is responsible for reporting the generation data for the facilities it certifies. This reporting requirement will be satisfied through the CEC-RPS-Track forms. Therefore, the asterisk indicates that the facility is utility-certified and that the procurement amount reported is accepted as reported on the RPS-Track form.

Southern California Edison RPS Procurement Claims Analysis

Southern California Edison 2001 RPS Procurement Claims

CEC RPS ID Number	Facility Name	Fuel Type	Annual Generation Procured (kWh)	RPS Procurement Claims by Other Retail Sellers (kWh)	Procurement Reported to Power Source Disclosure Program (kWh)	Generation Data Used for Comparison With Procurement (kWh)	Difference Between Generation and Procurement	Generation Data Source	Date RPS Certified

¹Procurement from Hanson Aggregates WRP, Inc. facility is ineligible to count towards the California RPS because this facility is not RPS certified.

²Procurement from Aliso Water Management Agency facility is ineligible to count towards the California RPS because this facility is not RPS certified.

³Procurement from Edwin Curtis facility is ineligible to count towards the California RPS because this facility is not RPS certified.

⁴Procurement from G Squared Energy (Alamitos) facility is ineligible to count towards the California RPS because this facility is not RPS certified.

* RPS identification numbers that end in the suffix E and show No Data in the column "Generation Data Used for Comparison with Procurement" are utility-certified facilities with no independently reported generation. As stated on page 47 in the *RPS Eligibility Guidebook, Third Edition*, the retail seller is responsible for reporting the generation data for the facilities it certifies. This reporting requirement will be satisfied through the CEC-RPS-Track forms. Therefore, the asterisk indicates that the facility is utility-certified and that the procurement amount reported is accepted as reported on the RPS-Track form.

**Southern California Edison
2003 RPS Procurement Claims**

¹Procurement from Hanson Aggregates WRP, Inc. facility is ineligible to count towards the California RPS because this facility is not RPS certified.

²Procurement from Edwin Curtis facility is ineligible to count towards the California RPS because this facility is not RPS certified.

³Procurement from Mountain View I & II facility is ineligible to count towards the California RPS because the procurement from this facility was for non-bundled energy.

⁴This procurement amount from Beowawe facility is owned by Sierra Pacific Power and used towards their compliance with the state of Nevada's Renewable Portfolio Standard.

* RPS identification numbers that end in the suffix E and show nothing in the column "Generation Data Used for Comparison with Procurement" are utility-certified facilities with no independently reported generation. As stated on page 47 in the *RPS Eligibility Guidebook, Third Edition*, the retail seller is responsible for reporting the generation data for the facilities it certifies. This reporting requirement will be satisfied through the CEC-RPS-Track forms. Therefore, the asterisk indicates that the facility is utility-certified and that the procurement amount reported is accepted as reported on the RPS-Track form.

**Southern California Edison

¹ The entity reported on the RPS-Track represents several small hydro facilities that have subsequently been certified individually in 2007. The RPS ID 60327E has been canceled. The EIA plant codes for the six projects are: 905, 6643, 6644, 6647, 6646, and 6645.

²Procurement from Hanson Aggregates WRP, Inc. facility is ineligible to count towards the California RPS because this facility is not RPS certified.

³Procurement from Edwin Curtis facility is ineligible to count towards the California RPS because this facility is not RPS certified.

⁴Procurement from Mountain View I facility is ineligible to count towards the California RPS because the procurement from this facility was for non-bundled energy.

⁵Procurement from Mountain View II facility is ineligible to count towards the California RPS because the procurement from this facility was for non-bundled energy.

⁶This procurement amount from Beowawe facility is owned by Sierra Pacific Power and used towards their compliance with the state of Nevada's Renewable Portfolio Standard.

* RPS identification numbers that end in the suffix E and show nothing in the column "Generation Data Used for Comparison with Procurement" are utility-certified facilities with no independently reported generation. As stated on page 47 in the *RPS Eligibility Guidebook, Third Edition*, the retail seller is responsible for reporting the generation data for the facilities it certifies. This reporting requirement will be satisfied through the CEC-RPS-Track forms. Therefore, the asterisk indicates that the facility is utility-certified and that the procurement amount reported is accepted as reported on the RPS-Track form.

**Southern California Edison
2005 RPS Procurement Claims**

¹ Procurement from Hanson Aggregates WRP, Inc. facility is ineligible to count towards the California RPS because this facility is not RPS certified.									
² Procurement from Edwin Curtis facility is ineligible to count towards the California RPS because this facility is not RPS certified.									
³ Procurement from Mountain View I facility is ineligible to count towards the California RPS because the procurement from this facility was for non-bundled energy.									
⁴ Procurement from Mountain View II facility is ineligible to count towards the California RPS because the procurement from this facility was for non-bundled energy.									
* RPS identification numbers that end in the suffix E and show nothing in the column "Generation Data Used for Comparison with Procurement" are utility-certified facilities with no independently reported generation. As stated on page 47 in the <i>RPS Eligibility Guidebook, Third Edition</i> , the retail seller is responsible for reporting the generation data for the facilities it certifies. This reporting requirement will be satisfied through the CEC-RPS-Track forms. Therefore, the asterisk indicates that the facility is utility-certified and that the procurement amount reported is accepted as reported on the RPS-Track form.

¹Procurement from Hanson Aggregates WRP, Inc. facility is ineligible to count towards the California RPS because this facility is not RPS certified.

²Procurement from Edwin Curtis facility is ineligible to count towards the California RPS because this facility is not RPS certified.

³Procurement from Mountain View I facility is ineligible to count towards the California RPS because the procurement from this facility was for non-bundled energy.

⁴Procurement from Mountain View II facility is ineligible to count towards the California RPS because the procurement from this facility was for non-bundled energy.

* RPS identification numbers that end in the suffix E and show nothing in the column "Generation Data Used for Comparison with Procurement" are utility-certified facilities with no independently reported generation. As stated on page 47 in the *RPS Eligibility Guidebook, Third Edition*, the retail seller is responsible for reporting the generation data for the facilities it certifies. This reporting requirement will be satisfied through the CEC-RPS-Track forms. Therefore, the asterisk indicates that the facility is utility-certified and that the procurement amount reported is accepted as reported on the RPS-Track form.

* RPS identification numbers that end in the suffix E and show No Data in the column "Generation Data Used for Comparison with Procurement" are utility-certified facilities with no independently reported generation. As stated on page 47 in the *RPS Eligibility Guidebook, Third Edition*, the retail seller is responsible for reporting the generation data for the facilities it certifies. This reporting requirement will be satisfied through the CEC-RPS-Track forms. Therefore, the asterisk indicates that the facility is utility-certified and that the procurement amount reported is accepted as reported on the RPS-Track form.
